Wisemen has been near me
he never ventures out of his home for fear somebody will get him

I would say he was being paraoid but in his case with the filth he
spewed and the other deeds he pulled he may indeed have reason to fear

LOL!!!!! Fatassed Markie would be more likely to fall on himself when
he waddles around with scissors.

> spewed and the other deeds he pulled he may indeed have reason to fear

But you aren't qualified to say anything, high school dropout. You are
projecting again, mentally ill retard. Why are you hiding up in the
U.P.?

Thanks to both of you for the reply. I wanted to try to turn the antenna toward those stations, because if they came in that good on the side of the antenna, they would have been crystal clear. We are having a severe heat spell. temps around of over 100deg.F That must have something to do with it. But it was too hot to climb on the roof

Mark.

We've yet to see any proof. Let's see, you can't communicate in any resemblance of English and you have the beginner's ham license. So much for your expertise.

> Hiding no Living here it is lovely county

Yes, you are hiding from something, perhaps your child molesting past?
Is that why you high-tailed it out of Illiopolis, IL?

ROFL, Sorry. I'm starting to believe laughing at him just encourages him
to make more typo's.  We need to stop laughing and pity him instead.

Maybe if he had to learn CW the mental process would help his spelling.

SC

LOL, Good one jawod. Did you come up with that all by yourself
or did you have to copy & paste one of Markie's spelling mistakes.

Not capable of producing a single coherent sentence.  Not capable of
learning 26 letter and 10 digits.  And thinking gives you a headache.

Only conclusion is that you don't have enough practice, so stop
thinking entirely before you cause permanent damage.

Who do you propose would buy the bands? The only ones even remotely commercially viable are 70cm and above, and those are such small segments that they wouldn't be all that viable either. The bands 220 and below are

not viable at all commercially because of the size of antenna needed. HF?
Forget it!. Maybe give it to the pirates to play with.. that would be the
only thing that could be done with it. I say leave it as is.

```

If you are considering a new vertical antenna, instead of guesswork and copying somebody else's un-thought-out efforts, download program RADIAL_3 from website below.

The program assists with choosing an economic length and number of shallow-buried ground radials. It takes a new look at how radials work by considering them to be lossy, single-wire transmission lines, open-circuit at the other end.

RADIAL_3 is a self contained file, 55 kilibytes. Easy to use. No training needed. Download in a few seconds and run immediately.

```

```

Interesting program my Hustler 5-BTV installation with 72 buried radials
came out at 97.17% efficiency
Cool program.

=====================================
If the Hustler 5-BTV has any loading coils in it then its efficiency
will be less than 97%.

The program applies only to simple unloaded verticals which got into
the program only to illustrate how the radials affect efficiency.

Reg.

I opened the front panel of the radio to look for the back light which stopped working.
There seems to be a factory mod, a thin green wire running from the output of Q3003 5v regulator under the top cover to a place behind the front panel.

This green wire has broken off from the position where it was soldered behind the front panel and I can not find where it is supposed to go. The radio will not transmit with this wire disconnected.

PLEASE, can any of you with this radio take a look and see where this wire is supposed to be soldered to?

Thanks

Joel

Sorry, CB'ers already got dibs on the bands after CW goes away.

I'm giving serious thought to buying a new vehicle and you know it's bad when your first thought is not the mileage or seating capacity, but where to plumb the radio! Does anyone manufacture an adjustable bracket that will fit into or around the luggage rack frames? I can fabricate my own, but not having a full-featured machine shop, it might not be as pretty as my wife would like.

Bad?  No... I'd say it's entirely natural >>grin<<

>                   Does anyone manufacture an adjustable bracket
>that will fit into or around the luggage rack frames?

Diamond makes several which might meet your needs.  The K515SNMO is an
adjustable (2-axis) mount with a "universal luggage carrier" bracket.
They even make a motorized luggage-rack-mount base (K9000LRM) which
you can lower electrically from inside the vehicle.

http://www.rfparts.com/diamond/Product_Catalog/mounts.html to see
photos;  the mounts themselves are available through the usual online
and storefront ham-radio dealerships.

Marine antenna mounts work great as well, and most are built to withstand the elements better.

See the AES catalog pages 78-89: http://www.aesham.com/pdf/pages78-89.pdf

for several types of mounts..

Ok, first I ask all of you smart folks to excuse my ignorance on this topic. But trust me, I have searched all over to find the how to's on this subject. Please let me know where I can either see pictures or some good instructions on this.

I assembled a FM 25B and its working well. Also, purchased and assembled the STC1 and it is working well.

What about the damb LPA1 RF Linear amp? Well.. Ive plugged in everything from an old shoe to rabbit ears and no help on gettin out there. Just kiddin about all that. But, they give you RCA jacks to plug an "Antenna" into. J2, the output. I know I need a dipole antenna, and plenty of people here has made one.

I am in need of some simple instructions, I have plenty of copper (and coat hangers if needed)to use.

Input from PC sound card, to STC1c
Output from STC1c to
FM 25B (Anyone know of any mods for that?)
Output from FM25B to
J3 (Input)RCA jack
J2 RCA Jack Output to?   (How stupud is putting a dang RCA jack there for an antenna?)

My email address is carl6405@yahoo.com
If you have this set up, please take a picture and send me so that I can see someone elses set up.

<snippety>

With the first-generation antenna installation for my van (better known as the 'Techmobile'), I used 10.5" high 19" blank aluminum rack panels, suspended by Adel clamps around the cargo rack crossbeams. See http://www.bluefeathertech.com/kc7gr/thevan.html for some outdated photos (major updates are pending). If you choose to do it that way, standard NMO mounts will not work (the rack panels are too thick). You will need 'thick mounts' (available via Tessco from Radiall/Larsen, PCTel, and other vendors).

It worked OK for a couple of years, until the rear hatch gaskets (where I was running the cables through) started losing flexibility and leaking in rainy weather. I converted everything to standard through-roof NMO mounts, and haven't had a problem since. I would recommend that you do the same.

Yes, there are safe-and-sane ways to drill the correct size of hole, even in a new car. My personal favorite is the Irwin Manufacturing 'UniBit,' also known as a step-bit. Well worth the $45 or so they cost.

Couple said Unibit's action with a standard deburring tool for sheet steel (available from any well-stocked hardware store), and you're good to go.

Reserve a full day, take your time, and drink plenty of water.

Happy installing.

Harbor Freight has a set of three sizes on sale for $9.99 right now
thought Aug. 14th. <http://www.harborfreight.com> Item 91616 The
website shows $19.99 but the retail flyer I got in the mail today shows
the $9.99 price.

DRILL 28 HOLE SIZES!
This compact set replaces 28 individual drill bits. Two-flute design

gives you faster, smoother cutting. Titanium nitride coating for cooler running.
Automatically deburrs holes as you drill
Quick-change 1/4'' hex shank
M2 high speed steel for long life

Sizes:
3/16'' to 1/2'' Six Step Bit (3/16'', 1/4'', 5/16'', 3/8'',7/16'', 1/2'')
1/4'' to 3/4'' Nine Step Bit (1/4'', 5/16'', 3/8'', 7/16'', 1/2'', 9/16'',5/8'',11/16'',3/4'')
1/8'' to 1/2'' Thirteen Step Bit (1/8'', 5/32'', 3/16'', 7/32'', 1/4'', 9/32'', 5/16'', 11/32'', 3/8'', 13/32''�, 7/16'', 15/32''�, 1/2'')
ITEM 91616-4VGA

And if you go to the store, make sure you take the retail flyer along

with you. The one time I failed to do so, the item was marked with
the higher (non-sale) price in the store, and they wouldn't honor the
flyer price without a copy of the flyer in-hand.

hi gary,

my car looks like a porcupine !   only kidding....

who counts drink cup holders, we count antenna mounts....

a few links for you,

antenex usa made antenna and mounts

http://www.antenex.com/

get the hole saw, hs34 it is the right tool for the job of hole drilling.

http://www.antenex.com/c_search.asp?

txtFunction=browse2&selFamily=MNA&txtSubFamily=X%2DACT%99+Hole+Saw

I get my stuff from radio outfitter.com http://www.radiooutfitter.com/

http://www.radiooutfitter.com/store/HS34.html

very good pricing, low ship fees and no problems...

>scratch? Drew a block diagram that was converted to a real schematic
>one block at a time where you did all the math, laid out the chassis,
>cut and drilled all the holes and built the equipment all by yourself?

3 receivers, about a dozen transmitters. Oh, yes, and the automation
system of the Hong Kong Space Museum planetarium, the old Amtrak
ticket printer, some software that's in use in over 50,000
installations around the world ...

But I'm not the typical ham, I've been a design engineer for a long
time.

>What is the biggest transmitter you've ever built or used? I'm a
>disabled now, but I worked in broadcast

Never built anything over a kilowatt, but engineered some pretty hefty
ones. (Ch. 40 in Waterbury CT, WWRL, WHN, a few others.)

(You remind me of an IBM HR department of old. They always wanted to
know the largest program the applicant ever wrote. Someone
legitimately told them, back when software was a few k, that he'd
written a 3 meg program. It was a translation program with a 3 meg
dictionary. You're playing "mine is bigger than yours.")

>Tell us, what can you do other than whine? Have you ever built a commercial TV
station from
>scratch?

All by myself, no. Ever build a planetarium automation system all by
yourself from scratch (including inventing some of the technology -
which is still, after 30 years, state of the art)? But I'm not going
to get into a pissing contest with you. If you were mentally as old
as you claim your body to be you wouldn't have started one.

>I found CW boring years ago, and have some hearing problems so I said
>to hell with Morse code and got involved in the equipment design end of
>things. It was more fun for me to develop a design and built it, get it
>aligned and working, then move on to the next design.

Since I totally depend on 2 4 channel BTE aids, I can't receive CW
that easily any more, but that's not a good reason for the FCC to drop

the requirement. It's not even a bad reason. But when anyone can guess well enough to pass the "technical" part of the exam, the license isn't worth much.

Bullshit

the No code movment (a multi national effort btw) got the the ITU
treaty amended as part of geting we think is best for the ARS

I will grant we may be wrong but we are proof that people ake a
difference

there are differneces one of them is folks like you are too bussy
keeping your heads down to recnize that power
> We're not the dog any longer.  We're not even the tail.
but WE the Nocode hams ARE, you and your side have been resting on
their wilted glory for years

I, like many hams, have gotten a lot of surplus stuff from Fair Radio Sales in Ohio.

Monday, I discovered Surplus Sales of Nebraska.

Nice people! Old school customer service. The web ordering isn't "modern". But they don't make a lot of money at this, I'm sure. So I.T. people are probably out of the question. But your order gets underway in about 48 hours.....

They told me the owner spends all day on the net trying to hunt down surplus stuff he can buy. So if you have anything, I was told to take a photo of it....and send an e-mail to him. His e-mail address is at the bottom of every web page.

Here's the website for Surplus Sales:

http://www.surplussales.com/

I believe that, at some speed, CW becomes a language. Most high speed operators are not reading the each character. They hear the word. They only resort to character copy on unfamilure words and names. Even the low speed op will hear many short common words.

That sounds like a language to me.

Win, W0LZ

>A rather lengthy thread contains erroneous claims on the above topics. Morse code is not a language. Language is communication of thoughts and feelings through a system of arbitrary signals, such as voice sounds, gestures, or written symbols, with such a system including its rules for combining its components, such as words. The words are the language. Morse code is the alphabet just like A, B, C ... Z are the alphabet. It is nothing more than the building blocks used to compose the words that actually are the language. English, French, Spanish, German etc. are languages. Hello, bonjou, ola, and hallo are alphabetic symbols combined to form a word meaning the same thing in the various languages. It doesn't matter if the word is written, transmitted orally or by CW, it is still just a string of characters that only becomes

>language based on the knowledge of the sender to combine them in the
>proper sequence and the recipient to translate it and receive the
>intended communication. Neither the alphabet nor morse code are
>languages.

DaviD,

The vast majority of 'businesses' are "Sole Proprietorships"
One Man trying to Create a Job for Himself and Ear a Living.
-IF- He is Good & Lucky - His Business will Expand and
He will be able to Hire Other People and Employ Them Too.
Small Business is the Foundation of Bigger {BIG} Business.

Three Points to Remember about Being-in-Business :
1 - Become Profitable
2 - Expand and Grow
3 - Continue in Business

business - think small and grow big ~ RHF

It' all because back in the 60's all those draft-dodger types went to Canada.
Canada not only welcomed them, but allowed them to breed. The gene pool has
never been the same.

When most adults read printed text, they don't look at each letter and sound out the word, at least for common words. Instead they see the shapes of whole words and recognize them as a unit.

This does not mean that "written English" is a distinct language from "spoken English".

CW is a modulation type. It is interesting in that it is the only form of digital modulation which can be encoded and decoded by an unassisted human in real-time. It is also interesting for a variety of other reasons, such as historical importance, widespread adoption, simplicity of equipment and readability in high-noise, weak-signal environments.

> That sounds like a language to me.

When abbreviations, prosigns and Q-codes are heavily used, one could perhaps make an argument for calling the entire system a dialect or pidgin. It is not a language in and of itself. There are very few thoughts you can express in CW alone, without using a real language (English or Esperanto or whatever) on top of it.

Although good code operators don't individually recognize each separate character, code is still not a language. It is a character based system that allows communication. The combining and ordering of characters, whether written letters of the alphabet on paper or tone representation in code, produce communication in whatever language the operator uses. The words in this sentence are English language. Someone with knowledge of German or Tagalo can take the letters and create a sentence in that

```
language. The same can be done with code. The letters and code are not
and never will be that language or any other language no matter what
speed is achieved.

   The old rotary telephones were "Digital Modulation" in that they
opened the line to control the Stowager stepper relays, or crossbar
switching eguipment. If you were good at it you could dial numbers with
the hook switch.

LOL!

I laugh when you lazy asses whine CW is keeping you from modernizing.

The code requirement isn't stopping anyone from modernizing. Hams don't want to modernize and won't modernize unless they're forced to modernize. That's what's stopping the modernization.

How does having a CW requirement prevent you from hooking a computer to a rig? It don't. You don't want to modernize because you're stupid or lazy. Just like you don't want to learn CW because you're stupid or lazy.

SC

Interesting that you mentioned that. I hadn't thought about it in
decades but as a kid I used to dial by tapping the switch hook all the
time. That wasn't a language either but it did involve equipment.

Naw, CW makes it too easy to communicate. CW is for lazy people. Real
hams want to struggle to copy signals through noise and QRM. That's
why they hate CW... it's no challenge!

Bill, W6WRT

Tandy Model 100 24KB Portable Computer / Disk Drive 2 / Barcode Wand / Software / Extras

This is an old but reliable Tandy Model 100 portable computer, one of the very first notebook computers. Everything tested and works but the tapes with the software are old so hopefully they won't cause any issues. I will include many tapes of both commercial and other software as well as several disks for the disk drive. Also have one original and two copies of the disk drive system disk. Even includes the very rare little white legs that prop it up at a comfortable viewing angle.

* Tandy Model 100 24KB Portable Computer
* Original Slip Case
* Original Prop Legs
* Quick Reference Guide
* Original Manual
* Disk Drive 2
* AC Adaptor
* Technical Reference Guide
* Barcode Wand
* Tape Recorder / Player
* Original Commercial Software Tapes
* Extra Software on Tapes and Disks
* Tape Recorder Cable

Compaq Armada 4125 / Media Base / Handle Battery / 802.11b Wireless

This was my workhorse laptop for a while a while ago. Works great and in very good condition. There is a little cracking around the hinges but it doesn't affect their function in any way. Solid machine for Windows 98 or Linux. Currently has Windows 98se installed. Battery charges but no guarentee on its life.

* Compaq Armada 4125
* Lithium Ion Handle Battery
* AC Adaptor / Charger
* Media Dock
    - Enhanced Speakers
    - CD-ROM Drive
    - Extra Battery Bay (Battery Not Included)
* Extra Hard Drive Caddy
* 802.11b Wireless PCMCIA Card
* Targus Notebook Case

Quasar HHC Handheld Computer / Printer / RAM Expansion

I picked this up at a hamfest a few years ago and then never did anything with it. It is not is perfect shape but it does come up and display things. I have no idea what it is asking or how to do anything with it so that is as far as I can test it. The slip case has a clear window that has clouded over time. It uses an internal rechargable battery which I cannot guarentee.

* Quasar HHC Handheld Computer HK2608UE
* Printer Cassette Interface PC913UE
* RAM Expansion PC944UE
* AC Adaptor Charger
* Mounting Tray
* Slip Case

Epson HX-20 Notebook Computer

I am cleaning out some of my old computers and came across this one. It is in very good condition and seems to work well. It has an internal rechargable battery that seems to charge but I make no guarentee on its life.

* Epson HX-20 Notebook Computer
* Modem Acoustic Coupler
* AC Adaptor
* Original Manuals

Tandy Model 100 32KB / Hard Case / Cassette / Software / Lucid Rom

I got this from a friend but I don't really have a use for it. It is all in pretty good shape, there is some yellowing of the top of the M100 itself. Everything seems to work but I have not tried reading all the tapes.

* 32KB Model 100
* Official Fitted Hard Case
* CCR-81 Cassette Recorder
* Cassette Cable
* Modem Acoustic Coupler
* AC Adaptor
* Software
    - Scriptsit
    - Statistical Analysis
    - Basic Language Lab
    - Lucid (On ROM, Installed)
* Original Manual
* The TRS-80 Model 100 book

Olivetti M10 8KB Notebook Computer

I have had this for a few years and don't really use it any more. It is in excellent shape and works perfectly.

- M10 8KB Notebook Computer
- Original Slip Case
- Quick Reference Manual
- Users Guide

NEC 8021a 32KB x 2 / 8231a Floppy Drive / 8207a RAM Expansion

I am cleaning out some of my old computers. I have had this for quite a few years but it is still working great. The floppy drive unit has some cracking around the back but it was repaired by the previous owner and seems to be holding up very well. Functionally the drive works great. I will include three copies of the system disk that is needed to access the floppy. The hard case has a water stain on the inside but it is in pretty good shape otherwise.

- NEC 8021a 32KB Notebook Computer
- Second Bank of 32KB RAM (Installed)
- NEC 8231a Floppy Drive
    - AC Adaptor
    - Serial Cable
- NEC 8207a 128KB RAM Expansion (4 Banks of 32KB)
- Official NEC Hard Case
- NEC AC Adaptor
- 8431al Manual

NEC PC-8500 / PC-8431A Dual Floppy / PC-8441A 128KB RAM Expansion

I actually bought the computer and floppy drive and interface new several years ago from a company that was selling off old stock. Sadly I no longer have the boxes. Everything seems to work perfectly and it is all in excellent shape. This system runs CP/M so you can find software for it from various sites. It also has several programs built in including wordstar and calcstar.

- PC-8500 Laptop Computer
- PC-8431A Dual Floppy Drive
- PC-8441A CRT / Disk Interface
- PC-8461A 1200 Baud Modem
- PC-8407A 128KB RAM Expansion
- Original Manuals
    - PC-8500 Users Guide
    - PC-8431A Guide
    - PC-8461A Guide
    - Wordstar To Go
    - Calc To Go
    - Telecomunications and Personal Filer Guide

- AC Adaptor
- Disk and CRT Cables

Epson PX-8 Geneva Notebook CP/M Computer

I have had this for a few years but I am not doind anything with it anymore. It is in very good condition and everything seems to be working. It has an internal rechargable battery but I cannot guarentee its life. The included AC adaptor is a generic Radio Shack model but it works quite well. This system also has the attached Multi Unit 64 with a Utility ROM installed.

- Geneva PX-8 Notebook Computer
- Multi Unit 64 H108A (Attached)
- AC Adaptor
- Utility ROM
- Wordstar ROM
- CalcStar ROM

Targus Notebook Computer Backpack from Xircom

I got this as a bonus with something I bought from Xircom years ago. I have never used it and it is in brand new perfect condition. It is actually a very nice Targus notebook backpack bag with lots of pockets and a strap to hold the computer and padding where needed. The pictures may not be great, black on black is hard to photograph well with my camera.

NEW A-Power External USB 2.0 2.5" Hard Drive Case

I bought this a little while ago but never used it. It is new and in perfect condition.

NEW COSMOS External USB 2.0 2.5" Hard Drive Case

I bought this a little while ago but never used it. It is new and in perfect condition.

Demon Gun Joystick for First Person Shooters PC Games

Picked this up at a computer show a few years ago and never took it out of the box. It is mainly for fun, really feel like you are shooting those monsters in your favorite first person shooter or other PC video game. Note, this is not a light pen and does not detect the screen, it is just a very unusual joystick.

Set of HP Omnibook 300 Manuals

I sold my Omnibook 300 years ago but just found these manuals. Hopefully they will be helpful to someone.

- Personal Information Guide
- Microsoft Excel Guide - The Basics
- Operating Guide
- Accessories Guide
- Word for Windows Guide - The Basics

USB Electronic Scale

I got this and then found a deal on another larger scale so I don't need this one. It is brand new in the box. It connects to your computer for its display and using the included software it can automaticall fill in some shipper's online forms.

New Small Silver "Multimedia" Keyboard

In searching for a couple keyboards for a specific use I bought this. It is a nice keyboard but didn't fit my needs. It is in perfect condition, new in the original box. Its dimensions are 11.5 inches wide by 6 inches deep (at the center) by 1 inch thick.

Targus Dual Mode Optical Notebook Mouse / Trackball

I was trying to find something to use for a specific purpose and this didn't work out. I have two but this one has never been opened. It is brand new in the original packaging. The dual mode part is that it can be used as a handheld trackball or as a more normal optical mouse.

I have for sale the fellowing equipment:
1.Yaesu FT-707 HF Transceiver with WARC Bands, 100 watts, Good Shape, Price
$275.
2. Yaesu FP-707 12 Volt DC  Power Supply, Nice Shape, $75.
3. Yaesu FC-707 Antenna Tuner with SWR/Power Meter, $75.
4. Kenwood TH-315A, 220MHz, HT, needs battery and antenna, works, $75.
5. Icom-02AT 2 meter HT in good condition, $75.
6. Icom IC-28H 2 meter Mobile transceiver, works, $75.
7. Dentron JR. Monitor/MobileAntenna Tuner, nice shape, $65.
8. Yaesu YD-844A mic, great shape, $55.
All prices are plus shipping. If your interested in any of the gear, please
e-mail me for more detailed information.  All gear has been checked out and
works. Thanks, Charlie Hugg, K5MBX

Nonsense. Having to do something promotes laziness? Then exercise
promotes sloth and dieting promotes obesity. By your "logic", that
is.

Not really, I just hate needless abbreviations, and even more so as
my vision gets worse.

I was asked a number of times why I didn't have a degree in EE. When
I found a problem, or saw something that needed improved I didn't just
run crying to the MEs. I researched the problem and wrote up a detailed
report. I found the way to correct the problem, found a source for any
part we didn't already stock, and submitted it directly to the engineer
responsible for that item. After a while they would just flip through
my paperwork and submit it to be typed up on the proper forms, then sign
it off. I had planned to go to college and get my degree, but my time in
the Army threw those plans out the window.

Not really, but a lot of guys have never done anything more than solder a microphone plug to a cable, and then use those crappy solderless coax connectors. Actually, I'm always happy to meet a ham with some real electronics skills. I meet a lot of retired hams here near Ocala, and very few of them know any electronics. I hear the same I could through together a CW rig from scratch in an emergency, then they admit they don't even have an old ARRL handbook to look up a schematic, or any parts. One told me he would use parts from his TV set, that the horizontal output tube and a few other parts would put him on the air. He didn't even know that his six month old TV only had one tube, and I've never seen a transmitter built from a CRT and salvaged, unmarked SMD parts.

Biggest isn't the goal, but a long term large project is always interesting. I always liked a challenge, and left the easy jobs for everyone else.

I never built anything like that, but I did repair some electronics for the manager of the planetarium at the Orlando Science Center years ago. I have worked on numerous industrial control systems, as well. Sounds like it was a bit of a challenge. Good for you. :) My next couple projects are an electric gate controller, and a motorized flag pole, both with custom controllers with 100 MHz Ethernet interfaces so i can run them from any computer on my home network. I have about 50' of used TV tower in storage. I'm going to weld angle iron up two legs and use a motorized trolley to raise and lower the flag. The gate openers are a pair of used 24" sat tv jacks with a custom controller, a web cam, and an emergency open button that sets off the security system as the gate opens.

What about the people locked out by CW requirements who wanted to design and test RF equipment? Not the "I don't do solder" types, but people with a real love of electronic design? I've always had a severe dropout in my hearing that made it impossible to listen to CW for more than a few minutes at a time. I would end up with headaches, some that lasted for days. I finally threw in the towel and went into other areas of electronics. I wanted to learn microwave communications. Along the way I worked in Broadcast and Two way radio servicing. My last job was building commercial microwave receivers at Microdyne. They were custom built from base models for the customers application, on whatever band or segment they needed, and with IF and video bandwidths from 10 KHz to 40 MHz. In a place like that you would have thought there would be a lot of hams, but I only found about a dozen still licensed, and not one who was still active.

indeed the idea that refusing to expand ones horizon is nonsense

and that is what the ars has done for years with it's contiued reliance
on code testing
>Having to do something promotes laziness?
nope not chnaging and resting on lareuls does

Greetings:

I have a lot of 5, Midland 18-330B UHF (445 Mhz and up) NMO mount mobiles antennas up for auction. These work very well for the 440 to 450 Mhz Ham band. They are 5/8 over 1/2 wave in design (about 3Dbd gain).

Cutting chart included to use them above 450 Mhz.

Please see:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZve3tjd

Thanks, Tedd, VE3TJD

i hear you on the headaches I remmebr them from my teen aged efforts at
Morse
amusing I listen I can lsiten to morse all day without a problem as
long I don't try to break it down at all then a headache sets in a in
matter of seconds and slowly grows as I try to process the signal

I can in fat qso in the mode using pc with a spectrographic display to
allow me to look at the parts of the signal I can't read with the pc

Greetings:

I have up on Ebay, a lot of 8 pairs of VHF crystals for the Kenwood
TR-2200
and the Drake TR-22 (I assume they will work in both radios as they
look
identical).

Please see:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZve3tjd

Thanks, Tedd, VE3TJD

I think you yank your radio event the cars radio since they are ll just
rpops for the govt to beam it contral waves in to your brain

and remeberthe fiol only work if it froms a complete air tight over of
your whole body

LOL! It started a long, long time ago.

When gasoline was 17 Cents a gallon, hams were complainining about how
hard it was to get to the FCC office and wanted a mail-order license.
The conditional was born.

It's been downhill ever since.

Im looking for the front cover for a Kenwood R-600 or a non working
radio as long as the face is decent.
Please reply to gi1pi@yahoo.com

Thanks, Gil

Sorry if this is off-topic. I couldn't find a more suitable newsgroup.

A 2500 Watt 120V generator (Powermate Proforce PM0102500) seems to
be working fine, but engine sounds a little rough. Why not touch up the
carburetor adjustment and see if that improves it?

First I turned the screw on the carburetor to the right. Some resistance
to turning, but absolutely no difference in engine speed or sound.

Then I turned the screw to the left. Screw is quite loose and still no
difference in the engine, but now I have gas leaking from the bottom of
the carburetor! I turned the screw to the right until snug, and the gas

leak has stopped.

There is no other adjustment visible on this carburetor. Is that screw
intended to drain the carburetor, or have I seriously messed up something?

I've searched the web for data, and only found that the 5.5 HP engine was
made by "Sumec". I gather that they make motorcycle engines, but found no
carburetor data.

Fred

The idea that testing someone promotes laziness is nonsense.

>>Having to do something promotes laziness?

>nope not chnaging and resting on lareuls does

So resting on your laurels and not learning CW promotes your laziness.
That's what I said and you agree.

take it to your favorite local small engine shop.... have them show you what and how to do a proper tune up on it, then pay the man.

It wasn't an abbreviation, it was a comment. From an old poster we
had in high school - "Six munce ago I cun't evun spel injunere, now I
ar wun."

>I had planned to go to college and get my degree, but my time in
>the Army threw those plans out the window.

Then I'm glad I chose the Navy.

>> You're playing "mine is bigger than yours.")

There have been many people on the air thanks to a 6BG6 or similar.

>He didn't even know that his six month old TV only had one tube, and
>I've never seen a transmitter built from a CRT and salvaged, unmarked
>SMD parts.

Interesting idea, though - a CRT as a final with an inherent monitor.
I wonder how much RF output you can drive a CRT to. And, if you made
it AM, would that be "focused" modulation? Or, if you were listening
to the flyback, "high sing modulation"?

>   I never built anything like that, but I did repair some electronics
>for the manager of the planetarium at the Orlando Science Center years

I'll take a stab - a Minolta projector? I doubt it's a Zeiss.

>   What about the people locked out by CW requirements who wanted to
>design and test RF equipment?

That was the whole idea behind the Tech ticket - minimal CW that
anyone could get to in a few weeks and enough written exam to prove
that you knew electronics. Anyone who can design or test RF equipment
should be able to draw a few schematics.

I am assuming that your intention is to mount V/UHF antennas on the
vehicle.... Being fully mindfull of the limitations of V/UHF, and that its
used for local repeaters and not DX, a real simple and inexpensive solution
would be to go with a glass mount antenna.... the one I run on my Tundra is
a 2m/70cm dual band "cellular look-alike"($25.00 on Ebay) on the passenger
top corner of the windshield. No holes *ANYWHERE* for antenna mounting, and
works sufficiently well, even on low level machines in rural south
Mississippi.

<snippety-two>

At that low of a price, I'd be really concerned about the quality of these bits. More specifically, are they made-in-Taiwan imports, made from Lord only knows what grade of steel, or are they the same quality as the Irwin products?

To put it another way: You gets what you pays for. Caveat emptor indeed...

I'm not inclined to drill holes if I don't have to. :-0

With regard to glass mounted antennas, I have never seen one that would
work properly over time, so I will avoid those as well.

The Diamond K515SNMO looks promising but it must live on the side rail
and not more centered. The cross members of what I am looking at
resemble an airfoil and are about 3 inches wide. Would be nice to have a
bracket that would fit over and under that cross piece and then mount to
the bracket. I might have to get some stock and go to fabricating.

Also be mindfull of your overhead clearance....The glass mount, cell
look-a-like is not a problem, but a 30+ inch tall diamond on top of a
vehicle could cause some problems in drive-throughs, garages, etc.
With the antennas that currently reside on my Tundra, my clearance is
12'6"....no more bank drive-throughs, fast food, parking garages, and plays
hell with low branches and wires.

I have both the original Unibit brand and the Greenlee imitation.
Both are equally good.  I have seen other brands, like Stanley, that
should perform well.  Some of the prices I have seen lately on good
brands make me shed a tear over what I paid 10 years ago.

>

There is one problem with mounting on the cross members of the rack...
After time, the cross member will be twisted due to the force on it from

the wind pushing on the antenna.
It will happen faster the higher the ambient temp, and material of the rack and color...
The only way to keep this from happening, or to minimize the flexing, is to mount it as close to the side rails as possible..
I would add an extra cross member right behind/before the stock cross member, and attach an aluminum or stainless steel plate with NMO hole to mount the antenna.
The resulting setup will be much stronger, and negates the special clamp/mount needed..

I don't know about how rare it is. It was also used in the Johnson Viking
(maybe called the Viking 1 as there was a second version that used a pair of
6146 tubes that is the equal of the 4D32).

They work fine for me, or I wouldn't have recommended them. In fact, I bought a spare set today, because they have a tendency to disappear from my shop I've never broke or jammed one of them. I normally use them in my drill press, but I have used the larger size to deburr 1/2" EMT when doing electrical work.

   The store in Ocala always has a stack of them on a stand right inside
the front door so you can pick one up as you enter the store.  Also, you
want to be on their E-mail list for specials.  For those you do have to
print out the e-mail w/coupons to get the extra savings.  The coupons
```

have a serial number so you can't buy more than the advertised limit.

Hey Joel

I did a search for you, and the only thing that turned up is this
message!

I posted the question on the SARL website as requested, and hold
thumbs.

You mean a PB-2?
http://www.batteriesamerica.com/kenwood1.htm

The BC-7 is going to be hard to find due to its age. Watch eBay.

NNTP-Posting-Date: 21 Jul 2006 14:58:17 GMT
Xref: g2news2.google.com rec.radio.amateur.equipment:5467

I just bought an IC-718 as a backup rig. My older IC-736 has a
carrying handle attached, and I don't carry that one much, so I
am hoping to transfer the handle from the 736 to the 718. The
spacing of holes etc. is identical on both rigs, but apparently
not the screws. The 736 uses metric 4 mm machine screws - does
anyone know what is used with the 718? If you have the Icom MB-23
handle kit (that's supposed to be for the 718) lying around, I'd
very much appreciate knowing what kind of screws it comes with.
Probably self-tapping ones, but I don't want to ruin the holes
in the radio by using wrong screws. I couldn't find anything on
the Web. Thanks a lot.

I don't think a CB will go that far.

Hi All,

     I have an old radio amateur's prefix map of the world on the wall in my
shack. I got it from the radio amateur callbook company about 25 years ago. The
size is about 30" X 40". It's outdated prefix wise, and it is starting to show
its' age. On 1 side it has ITU zones and on the other side it has CQ zones. Does
anyone make a map like this any more ???

                       RON...KA2IIA

Icom and Yaesu usually have such at their booths at Dayton. That's where I got mine. You might also try checking the ARRL website and see what publications they have.

Hi all,

My friend has the following equipment for sale, all boxed, as new (the
'Palstar-R30CC' is new).

First of, a Yeasu 'FT101ZD/3', includes the following, external phone-patch
speaker, two VFO's (one digital), also included is the
ATU.....................price......�450.00 plus post, or collect.

Second item, 'AOR-3000A' RX.....................price........�300.00

Third item, 'Palstar-R30CC' (two Collins filters)....price.......�250.00

Fourth item, 'AOR-3030' RX (includes the wide-band VHF
converter)......price...�250.00

Fifth item, 'Yeasu-FRG100' RX.............price..........�250.00 (or
offer).

All the above plus postage, or inspect and collect.
Payment by, cash, postal order or cheque (allow 7 days for clearance,
sorry, it's the banks !!).

Thanks to all for reading, have a great weekend, Ken, G4KIR.

Does anyone have any information on the Patcomm PC-16000A mod for MARS operation?

Thanks,

John

the idea the radio could contact the dead was bad enough in frequency

```
do you need to repeat it

but one of your other nicks is hey stupid so I guess we must expect
that

There's the problem. "breaking down" CW is like listening to the
letters someone is speaking. You don't break it down, you listen to
what's being said.

And you don't believe that corporations don't try to influence the
outcome of an election for which particular reasons? It's not called
"pork-barrel politics" for nothing!

You must hail from one of those inbreeding states!

JB

Noon-

I was hoping to find someone who was more familiar with carburetors than I
am, that may have run into an adjustment like this one.

I've already "paid the man" for a brand-new unit. It isn't quite like I
had a bag of parts and wanted instructions on how to put it back together!

Fred

Try this on for size... have your favorite small engine mechanic do a
program for your local radio club on general maintenance, tune-ups etc for
generators... after all, it *IS* hurricane season :-)

fuck off

It is painfully obvious you are nothing but ahter of Ham radio and yet
you matian a license and go around bashing real hams interted in the
future of the service

You are proud to be a US Citizen.

Canadans, Cubans, Mexicans, Brazilians, Argentinians, Chileans, etc.,
are also Americans.  The name has been high-jacked.

- You are proud to be a US Citizen.

-

- Canadans, Cubans, Mexicans, Brazilians, Argentinians, Chileans,
- etc., are also Americans. The name has been high-jacked.

RE,

The Mexicans just may refer to themselves as : Norte Amercanos
-or- Americanos del Norte
http://pt.wikipedia.org/wiki/Estados_Unidos_da_Am%C3%A9rica

The Cubans might call themselves : Americanos de Cuba.

Seriously NO Canadian would call themselves an : American [.]
- - - Even the French Canadians would say : Je Suis Un Canadien !

And the Argentinians, Chileans would most likely call themselves :
Sur Americanos -or- Americanos del Sur -or- Americanos Latinos

The Brazilians being slightly different would say : Americanos Sul

Only an American (USA) would Boldly Say :
I Am An American ! - and I Am Proud of It !
and so say i ~ RHF

Learning something promotes laziness? Typical.

>learning CW promotes laziness

Yep, as I said, typical. Of a lazy person. Learning doesn't promote
laziness, laziness promotes not learning.

Well at least your estate will get to keep your life savings. If you get
sick late in the year, and the healthcare facility/hospital shut down
for the rest of the year because it ran out of government money (a
typical scenario in Canada), there will be no one to give you any care
and you'll just die. But hey, your life savings will still be intact!
Is socialized health care great or what?
>

Hi Brian, I'm not sure what to think. I can't understand why an advanced ticket ham has nothing better to do at work than troll cb groups and alt.gossip groups on company time, using company servers. I really don't think Joe Hunt would like a list of all your activities, so you might think twice before you start trolling cb groups and making statements on how "stupid" they are......................LOL!!! you were way to easy to find KA3CDG

I am one
I try to operate as Good returning good for evil to point of course
which you have croosed in your effort to promote the destruction of the
ARS

>
> > interested in the future of the service
>
> Really? So how many computer languages are YOU fluent in?

well Fortran Pascal (I always liked that one) assably with ADA
assmebly language Basci of course C at some level but not using much
they may have added to it sincethen

but what does this have to with the future of the ARS

- You are proud to be a US Citizen.
-
- Canadans, Cubans, Mexicans, Brazilians, Argentinians, Chileans,
- etc., are also Americans. The name has been high-jacked.

RE,

The Mexicans just may refer to themselves as : Norte Amercanos
-or- Americanos del Norte
http://pt.wikipedia.org/wiki/Estados_Unidos_da_Am%C3%A9rica

The Cubans might call themselves : Americanos de Cuba.

Seriously NO Canadian would call themselves an : American [.]
- - - Even the French Canadians would say : Je Suis Un Canadien !

And the Argentinians, Chileans would most likely call themselves :
Sur Americanos -or- Americanos del Sur -or- Americanos Latinos

The Brazilians being slightly different would say : Americanos Sul

Only an American (USA) would Boldly Say :
I Am An American ! - and I Am Proud of It !
and so say i ~ RHF

      No problem. 4warned is 4armed. k35454.

Ahhhh, what ytou need is some good advice. Well there is a place where
good advice is available for small gensets and the like. Get yourself on

over to www.smokstack.com and you certainly will find someone there in
the forums, who can advise you on your genset.

I agree with that.

Whether you like or use CW or not, dumbing down as hurt ham radio.

Me-

That www.smokstack.com is a goldmine! I've just spent the last couple of
hours reading about various problems others have with their generators.
Thanks for posting the URL.

Fred

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/247756

Topics discussed in SolderSmoke #27:

-- Computer woes
-- Bill's visit to the Dominican Republic
-- Building Xtal oscillator with kid
-- Book Reviews:
   "The Art of Electronics"

   "The Electronics of Radio"
-- Ether and Quantum Mechanincs, Tao of Physics
-- SolderSmoke Mailbag: Nigel in Dover, Mike WA6AWA, Matt KC8COM

CHECK OUT A PICTURE OF SOLDERSMOKE'S LONDON STUDIO:
http://usgadgeteer.blogspot.com/

Listen at: http://www.ourmedia.org/node/247756
Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/247756

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London
Bill M0HBR N2CQR CU2JL

Sorry John, do some reading for once as that is the reality of the Canadian system. You'll actually learn something if you do research yourself and not just listen to NPR and CNN.

Now, on the other hand, if you live in the U.K., you'll still have healthcare through the end of the year, but if you are too old, they just let you die as it is not worth the expenditure to keep someone old alive even longer. But again, hey, your estate gets to keep the money!

Come on, this isn't really John now is it? Hillary Clinton, is that you?

True, Markie was in the Special Ed classes and they tend not to
actually call their retarded students "retards."

Dumbing down has hurt ham radio.

>people that live in glass house whoudl dress in basement

Yep, you should.  Try:

"People who live in glass houses should dress in the basement"

It's ironic justice that someone who posts a typo flame posts more
typos in his flame than the post he's flaming.

"That's what his teachers said in grade school spelling class too"
is what ihe typed and what you just lied about

you are dishonest but most of the CW advocates are

gee I am not the one that lies about the contents of posting here and
clips away the evdence of my lies

that is

you want to fosillize and kil the ARS that is a fact

Id like to save it
that makes me a better ham than you hands down

esp when you don't give your call cowardly troll

Go to
http://www.icom.co.jp/world/support/index.htm

click on 'Manuals,' agree to the license, scroll down to 'Amateur,'
download the manual for the IC-725, look at page 31 (34 in the Acrobat
window).

I think you may be interested in 'R210' for the 100W power adjust.

Watch the current, 73!
W8LNA

Please avoid posting binaries to non-binary newsgroups.
It makes many NNTP server admins grumpy and
endangers the continued propogation of this newsgroup.

Note that there is a newsgroup specifically chartered for
that kind of thing, namely....
news:alt.binaries.schematics.electronic

>
> The first answer: well, I think I'd certainly *try* to renew my
> license. My CW is distinctly rusty - I use it only rarely, and I'm
> not sure I've ever managed to copy 13 WPM (let alone 20) well enough

> to pass the one-minute-error-free barrier, or be able to answer the necessary number of questions. So, it'd take a bunch of listening and practice to reach that level.
>
> I'm not sure I have enough time free to do it. I've got a busy life, work full-time plus a bit, and much of my ham-radio playing time goes into other areas of the service (I'm an ARES/RACES AEC for my city, a mutual-aid comms responder for the county, and I've put in a huge boatload of hours over the past couple of years helping redesign and rebuild and debug the local hospital's repeater system). Getting really serious about doing high-speed CW would consume a lot of time, which would necessarily subtract from my ability to (e.g.) spend many hours of circuit analysis and modelling and experimentation to figure out why the fancy commercial repeaters we bought had such lousy-sounding audio (turns out the designer had mis-used the discriminator IC, forcing it to "clip" the signal internally, *and* had messed up the design of the de-emphasis network.)
>
> And, I have no assurance that I'd ever reach that level. As several other people have commented, it's perfectly possible for people to work, hard and honestly, at copying CW for years, and never be able to reach the 13 WPM level. I strongly suspect that to some extent, CW-copying is tied to certain sorts of neurological organization in the ear/brain system - some people may be born with more potential ability to handle high-speed CW than others. Effort or no, some people seem unable to learn to copy CW at all, others can do so but never become very good at it, and *many* people report hitting the "13 WPM wall" and never being able to copy reliably at rates much faster than that.
>
> Now, in your previous epistles on the subject, you and your nym-clone were advocating not only requiring testing for 13 WPM (General) and 20 WPM (Extra), but also making the no-code license a one-year nonrenewable. If that proposal were accepted, there's a strong possibility that I'd end up being kicked off of the air the next time my license came due... either because I was unable to push up to 13 WPM no matter how hard I tried, or because I'd devoted my time to other aspects of ham radio and hadn't taken time to study-up.
>
> So - that's my answer. I might end up being able to renew my license (although probably not at the 20 WPM level), I might fail the CW test, or I might just decide that the "old boy's club" had made it clear that they didn't want anybody other than rabid CW operators on the air, and decide to go do something else productive with my time.
>
> Now - that being said - let's address why you were being called a troll. I think it's because it's quite clear to people reading these threads that you have a serious agenda, sir. You've made several attempts (apparently under several posting IDs - some refer to these as "sock puppets") to drum up support for your CW Uber Alles rules change proposal. You've scoffed at, or simply ignored, the many people who have pointed out that your proposed changes are 180 degrees out of phase with the international trends (i.e. the WARC rules), and

> with the FCC's publicly-stated feelings on the matter, and that your

I've traveled all over the U.S. with HTs, scanner receivers, chargers,
and antennas in my carry-on suitcase.  Never had anyone so much as
question it.  As long as none of the equipment is on the prohibited list
you should have no problem.  You should be prepared to power up any of
the battery-powered gear to show that it is operational.  Take a copy of
your license along just in case you get one of those aggressive /
untrained TSA types.

Besides, NNTP isn't a great file transfer protocol.

Put it on a 'free file' server somewhere and post the link.

Yup, I stopped at the Advanced and then the code requirements for Extra were lifted. So there I stopped. Might do it anyways for the extra few KC the license grants me.

I have one that's in so-so condition. I had the radio too but sold it
and forgot to ship the manual.

At least it's probably better than a copy since the photos are clear.

Give me an address and I'll mail it to you. If you want to send me
back whatever postage I had to use it will be a deal.

Can you help me roughly CALCULATE how to increase the range of my home Internet wireless WiFi setup to a shed 300 feet away from my house?

Presently, I can walk about half the way through the wooded area to the shed with my laptop in hand before I lose the connection to the PCMCIA 802.11b,g Linksys card. Basically I need to gain 150 feet in "range".

But how?

At the store, I immediately become confused as I try to compare $30 USD omnidirectional antennas (D-Link ANT24-070) that boost "power" by a claimed 7 db; $50 USD directional corner antennas (Hawking HAI15SC) that claim 15 dbi (whatever a dBi is); and $150 USD 802.11N routers that claim to boost omnidirectional "range" by 4x (Linksys WRT300N).

How does an omnidirectional 7 db or directional 15 dBi boost in "power" equate to range?

Approximately how many decibels of (omnidirectional or directional) power do I really need to boost my WiFi range from about 150 feet to the 300 feet I need?

Looking up what a decibel is (http://en.wikipedia.org/wiki/Decibel#Definition), I calculate the D-Link ANT24-070 omnidirectional antenna gives me about 5 times the power (assuming 7 db = 10^7/10 ~= 5); but does this get me the additional 150 feet of range to my shed?

Spending almost twice as much money on the Hawking HAI15SC directional antenna gets me roughly 30 times the power (assuming 15 db = 10^15/10 ~= 32); but is that enough power to get me the range to my shed?

Indeed, is there some way to add a Hawking 15db antenna on the receiving end to get 1,000 times the power (15 db + 15 db = 30 db = 10^30/10 ~= 1,000); but what would I hook the wire output from this receiving antenna to in the shed (I can't hook it to the pcmcia card, can I)?

Given those db calculations, how do I compare the antenna options with replacing my home 802.11b,g router with the 4X range $150 USD Linksys 802.11n WRT300N router and the required $120 USD Linksys WPC300N PCMCIA card (assuming 6 db = 10^6/10)?Will this three-antenna 802.11n router be forced to drop down to 1X speeds because inside my house my kid's laptops will all be using 802.11b or 802.11g? Or can the router work on both 802.11g to one computer and on 802.11n to the other computer at the same time?

I'm so confused!

All I want is to make a well-informed buying decision to increase my WiFi range reliably to 300 feet to a known point.

Can you help me sort out all these very confusing variable (to me anyway)?

I have no training in electrical engineering; but I can google.

Thank you,
Beverly

Hi Dave,

First thank you for taking the time to help me and anyone who read this.

Second, I'm going to have to go slowly with you so I'll respond one by one.

Third, does your statement that 6 dB of gain equates to 2 times the range mean that the "square root" of the power difference is my key to calculating the range?

That is, is this range calculation from dB power roughly true (based on what you said)?

6 dB = 10^(6/10) ~= 4X the power, where the square root of 4X equals a doubling the range (assuming an omnidirectional antenna)?

Beverly

> 6 dB = 10^(6/10) ~= 4X the power, where the square root of 4X equals a

> doubling the range (assuming an omnidirectional antenna)?

I'm hoping I can extrapolate from the above statement to calculate the dB gain for the $150 Linksys WRT300N router which claims a 4X range improvement (so I can compare the $50 antenna's effect with that of the 802.11n router).

Following your lead, the power improvement necessary for a 4X range improvement is 4^2 = 16X power gain.

This 16X power gain then equates to about 12 dB (since 12 dB = 10^[12/10] ~= 16X power).

So, is it safe to calculate that the claimed 4X range improvement of the Linksys WRT300N wireless broadband router can be compared to that of a 12 dB gain omnidirectional antenna?

Beverly

Hi Dave,

Oh my. I guess the Hawking marketing folks were trying to trick me by
quoting a decibel number that was higher those I compared with.
 15 dBi ~= 15 -2 ~= 13 dBd

That makes the $50 USD 15 dBi Hawking HAI15SC Hi_Gain Antenna drop down
from a gain of 32X power to only 20X power which gives me about a 4X range.

 13 dBd = 10^(13/10) power ~= 20x power

Assuming the square of the power is the range, I get 4X range.
 20^(1/2) ~= 4X range

Assuming my reliable range is 100 feet, that equates to 400 feet of range.
 100 feet * 4 = 400 feet range

Interestingly, for comparison purposes, that is the SAME RANGE that the
much more expensive Linksys (Cisco) WRT300N router claims.

Do these calculations make sense?
Beverly

>
> 6 dB of additional gain is four times the delivered power at a given
> distance, or twice the range for the same amount of power.

So that I may compare the different options available at the store to me for increasing my range, are these simplified calculations below correct?

a. 3 dBd additional gain = 10^(3/10) ~= 2x the delivered power
b. 2x power = 2^(1/2) effective range ~= 1.4X the range

b. 6 dBd additional gain = 10^(6/10) ~= 4x the delivered power
b. 4x power = 4^(1/2) effective range ~= 2X the range

Can someone let me know if these calculations are correct because that helps me equate the different antennas and routers to the one measure I desire, which is effective range in the area of 400 feet.

Hmm. I wonder. This is too good to be true. So, I will be a bit critical with you (i.e., the scientific method) just to "test" the assumption so that I can be sure I understand your position.

Assuming a 9 dBd increase in the directional gain from putting a pie tin behind one of my existing router antennas, that equates to either 280 or 380 feet of range based on the calculations below.

a) 9 dBd = 10^(9/10) power gain ~= 8x power gain
b) 8x power gain = sqrt(8) range gain ~= 2.8X range gain
c) 100 foot range * 2.8 ~= 280 foot range

I'm a bit confused about the "range gain". May I ask if thta 280 foot range is the total range or the range improvement?

That is, is my range with a pie tin behind the antenna 280 feet in toto; or is the range now the 100 original feet + 280 additional feet which equals 380 feet in toto?

Beverly

I always liked the idea of the 13/20 wpm requirements because it did push us to greater heights of achievment.

Some want to be Doctors and some want to be rice pickers. That should not be taken away from us. In one country I recall, it was mandated that ALL would be rice pickers at the barrel of an AK47 by sadistic nut jobs with a grudge against achievers. Of course the result was 2 classes: The bullies and the rice pickers. Perhaps the bullies had little regard for anything but rice and violence.

Mastering the code and advancing in speed requires determination and control of ones emotional state to allow the information to flow. This is very difficult for beligerant people to do, so they complain, bitch and cajole rather than just doing what needed to be done. As for the technical requirements. Not enough. Even beligerant people can learn to field strip a rifle.

One of the greatest mistakes people make is to try to analyze and manage things beyond their control. The ear/brain thing people are talking about is irrelevant.

The process is there if you let it happen. Designed by The Creator. Forget about concentration, forget about analysis. How many of you really think about all the connecting tissues that have to be pulled in order to just walk? Just start writing down on paper what you are hearing. Don't think about it at all. Above all find the peace to release the anxiety of missing a word or character and just continue. This is where the self-control comes in. Soon you will find the errors less and less and you will be able to fill in the missing characters and words by memory.

Find the peace of Jesus and all is yours.

Hi Peter Pan,

Oh my! Is "wireless" daisy chaining workable? Is it that easy?

I did not think I could just daisy chain multiple routers! Are you sure?
(My shed has no power but I think I could run an extension cord into it if
that would make things workable.)

Would I just set the second Linksys router (which, amazingly, has it's own
wikipedia entry at http://en.wikipedia.org/wiki/WRT54G) in the shed on the
same channel (SSID=12, name = default) as the first router in the house?

That is, could I put one linksys WRT54G in the house (perhaps with one
antenna replaced with a 7 dBd higher-gain directional antenna); and then
put the other Linksys WRT54G in the shed 300 feet away (perhaps with one of
it's antennas replaced with a similar 7 dBd directional antenna)?

Or, is it best to hardwire with cat5 the first router downstairs in the
house to the second router, say upstairs in the attic window pointing the
antenna toward the shed? I didn't even know that two routers could be daisy
chained. That might solve my dilemma.

Can someone confirm that two routers could be daisy chained either by wire
cat5 cable or by wireless signals as long as they use the same SSID channel
and network name? That solution seems to easy to be true ...

Beverly

> If your goal is to increase your range then add an extender
> (hams would prefer to call them repeaters).

Oh my. The seemingly perfect option.

I had come across the concept of wireless "repeaters" in my initial
googling before I went to the store, e.g., in this Microsoft "how to
increase range" article
http://www.microsoft.com/athome/moredone/wirelesstips.mspx and in this
"Extending WLAN Range" article
http://www.wi-fiplanet.com/tutorials/article.php/1571601

The repeater most often recommended was the "Linksys Wireless-G Range
Expander WRE54G".

However, I can't find that 802.11b,g WiFi repeater (aka range expander or extender) anywhere in the local stores. The salesperson who sold me the $300 USD 802.11n router and PCMCIA card combination said they didn't work so they dropped it.

This solution seems to be the most elegant of all (but someone else suggested just using a second router).

Can someone unconfusify the situation?

Is placing a repeater (on the same SSID) in the shed really the same as adding a second router instead?

Beverly

Hi Stephen,
I'm confused about this "access point" thing.

Is that the same as a "router"?

Is it as simple as buying a second router (routers are familiar to me) and just hooking that second router to the first router by cable and that would extend my range by the distance of the cable connecting the two routers?

This is a key confusion point for me!
Beverly

Beverly Erlebacher wrote:
> I'm confused about this "access point" thing.

An access point is a device with an ethernet port on one side and a wifi port on the other. In technical terms it would be called a "bridge". It "bridges" two seperate network segments, although in this case they use different topologies (100Base-T and WiFi).

> Is that the same as a "router"?

The usual WiFi router consists of a four port ethernet hub (LAN ports), a seperate single ethernet port (WAN port) and a WiFi access point. It is set up to "route" between the single (aka WAN) port and the other two ports, the LAN and WiFi. Most of what it does for routing is NAT (network address translation) and some sort of IP tunneling.

If you ignore the WAN port and just use the LAN ports, you have a four port hub and an access point.

> Is it as simple as buying a second router (routers are familiar to me) and

> just hooking that second router to the first router by cable and that would
> extend my range by the distance of the cable connecting the two routers?

Yes. Just make sure to use the LAN ports. It would be best to use different channels. Most WiFi clients are smart enough to use the channel that is the strongest if they have access points on more than one with the same SSID.

Make sure to use encryption. Encryption is NOT to keep your data safe, nothing can do that. If someone is intent on accessing your network, WEP encryption will not keep them out.

What it is for is to convince the guy driving down the street looking for an open network to send out SPAM, or "share" kiddie porn, to drive on. Unfortunately, most users don't even change the SSID of their network, let alone set an encryption key.

Having tuned in late, if you want to have an open network, look up PublicIP. It's a "live cd" that runs on a PII or better (x86) computer and provides all the functions you need to offer a secure and safe open network.

Geoff.

I am getting older and the 940 is getting heavier ..... looking at the 897 for FD use and as a backup .... I did check e-ham and the related comments which would probably fit essentially all the equipment out there .....My primary concern is if the 897 is an acceptable plus CW radio ..... I don't really care about the SSB attributes or deficits. Now don't say the K-2 with 100 watt amp as I built a K-2 and don't have the time at present to pursue another build ......although I really like that rig ..... Thanks in advance to all .

I have moved my junkbox surplus stuff to a new website.

http://www.hamradparts.com

1N4148 Diodes $3.00 for 100, $4.00 for 200
1N4001 - 1 Amp 50v General Purpose Rectifier Diodes - $3.00 for 50

33pf NPO Caps, SMT 0805, 50V - $3.00 for 100
150pf NPO Caps, SMT 0805, 50V - $3.00 for 100
220pf NPO Caps, SMT 0805, 50V - $3.00 for 100
390pf Caps, SMT 1206, 50V - $3.00 for 100
1500pf NPO Caps, SMT 0805, 50V - $3.00 for 100
3300pf Caps, SMT 0805, 25V - $3.00 for 100
.1uF Caps, SMT 0805, 50V - $3.00 for 100

SPECIAL SMT PACK - 50 of each listed value $9.00
350 total parts

2N3704 NPN TO92 - 20 for $2.00
2N2907 PNP TO92 Package - $4.00 for 50
2N3904 NPN TO92 Package - $4.00 for 50
2N2222 NPN TO18 (metal) Package - 5 for $1.00
MMBT4403 PNP SMT transistor - 50 for $4.00

SPECIAL: 100pcs PN2222A Motorola $7.00- FREE SHIPPING

2N2222 NPN TO92 Package - $4.00 for 50
The 2N2222 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

2N3906 PNP TO92 Package - $4.00 for 50
The 2N3906 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

IRF510 - MOSFET AMP TO220 - 4 for $5.00

Crystal Ladder Filters anyone?
3.575611 Mhz HC49 Crystals - 5 for $2.00
4.9152 Mhz HC49 Crystals - 10 for $3.00
9.830 Mhz Crystals (SS2 package) - 20 for $3.00
LM7805ACV 5v Positive Voltage Regulators (TO220) 5 for $2.00
LM386N-1 - Audio Amp 6 for $5.00

Sticky Back Rubber Feet for your projects, self adhesive - 8 to a strip
- 2 Strips for $1.00

Panasonic Wall Warts - 12VDC, 500mA (center negative) $6.00 each
If you need center positiove, cut off the end and reverse it. I use
these to power my
rock mites, my TT2, and all of my homebrew test gear.

8pf NPO Ceramic 50 for $3.00
11pf NPO Ceramic 50 for $3.00
12pf NPO Ceramic 50 for $3.00
22pf Ceramic 50 for $3.00

470pf Ceramic 50 for $3.00
560pf Ceramic 50 for $3.00
.1 uF (104J) NPO Ceramic 50 for $3.00
.01uF (103K) Ceramic 50 for $3.00

SPECIAL PACK - 25 of each listed ceramic $10.00
200 parts total

Cash, check, paypal now accepted

Paypal to: orders@hamradparts.com

Add $3.00 shipping to any order under $50.00 unless you are ordering the special Motorola PN2222 transistors.

That is why I have always proposed that licenses shouldn't be
automatically renewable.  When a license expires or is just about to
expire the ham must retake and pass all exam elements required for that
license class before it can be renewed again.

99% of the hams on usenet hate my proposal.  They think you shouldn't have
to be proficient at anything to have a ham radio license.  I think the
reason all this came about was after ham radio was dumbed down by
restructuring alot of CB'ers were able to get licensed and oppose anything
that might required you work to be proficient and valuable asset to the
service.

I know you're right.

Hams just want to be appliance operators these days and they don't want
license exams that will interfere with them getting to those appliances
even though it means being less worthy. I don't see anyone modernizing
like everyone says is happening. They just get their licenses and grab a
microphone. What percentage of hams have a computer connected to a

radio? Probably less than 30%. Hams don't want to modernize. Guess we just have live with inferior operators on the bands from here on out. Then again, maybe hams shouldn't be required to be knowledgable or have skills. Requiring skill and knowledge is too old skool. Everything must be outcome based these days, even licensing. It ain't like we have to help out in emergencies or anything. Thanks Dave, I hadn't thought about it like that before.

Just exactly what are you trying to babble out now? Having more qualified hams will kill the service? An amateur radio license isn't worth enough that you should have to work for it? License candidates are lazy and won't work to get a license?

Please babble to us how requiring more proficient amateurs will kill ham radio.

Nonsense.  That's an illogical conclusion on your part, and _not_
something which has been stated, or can reasonably be inferred from
the postings that I have seen in these threads.

I think that's one of the problems here. CW isn't just an operating
mode - it's a language, and the test already includes one language, so
testing for knowledge of a language isn't anything new.

There's NEVER been a test of CW operating mode, technique or ability -
just proficiency with the language of International Morse. Since one
must demonstrate proficiency with another language (English) to obtain
a license, it's a matter of degree, not a matter of kind.

He's right, though. Anyone who ever heard K2SUC out of Nutley, NJ,
would agree. The repeater wars of the 60s and 70s. The 146.715
repeater on Long Island in the early 70s.

We've had our share of pre-VEC idiots. But it was never as bad as
even some of the things you hear on 75 these days. I rarely plug a
mic in.

the test do no t include another lange or even english as a lang

but it is load of bullto say Morse is a language
>

no such requirement exists indeed if you can read then the question and
answers are suposed to read to you and your aswers taken down

no requirement to understand english exists in order to be licensed

if it were a mistake the only bigger mistake would be to elimate half
of the curent numbers of licensees

but in any case the FCC will never take my prevledges thay have made
that clear accordingly you need to learn to deal with what is instaned
of trying to overturn history
>
> >>You couldn't have got licensed under the old system.

> There were plenty of hams when 13 wpm was the entry level.  A 5 wpm
> code test and a *real* written test wouldn't kill it, it would just
> separate those who are willing to do what it takes to be hams from
> those who just want the license without the work.
maybe nut the current entry rates sugest otherwise and He does not
propose 5wpm and writeen test he prososes 13 wpm and a total lack of an
effective entry class and elimiating half the current licees and likely
a lot more than that

and any "paln" that involves dumping 300,000 hams right of the bat is
pretty going to finish off the ARS

There's a difference between earning and being able to get with no
effort.

>> >> The no-code license was a bad idea to begin
>> >> with anyway.
>>
>> >perhaps it was (I don't agree it was but I will grant it might be)

>of the curent numbers of licensees

That you have an opinion doesn't make the opinion something that
should be government policy.  Who do you think you are, Bush?  (Oh,
forget that - his opinion isn't worth as much as yours.)

>but in any case the FCC will never take my prevledges thay have made
>that clear

Right - the government NEVER changes anything.  Are you really that
naive?

> accordingly you need to learn to deal with what is instaned
>of trying to overturn history
```

I have nothing to deal with - I'm licensed, and could keep my license if they made 20 wpm, or digital mode testing, a yearly requirement. The biggest problem would be freeing up a day to get to wherever the test was being given.

>> >Acualy I could have gotten one

>> It was you who said, "I having never been able to passa code test", so
>> you couldn't have.

>you spoke too soon

No, you could have stolen a license - you couldn't have been licensed. There's a difference. Robbing a bank isn't earning a salary.

>> That's not passing, that's cheating. If you're old enough to go to
>> school you're old enough to know the difference.

>so it is cheating it still is obtaining a license

That's about what it's come to these days, isn't it? We can't hurt people's feelings by telling them that they're just not qualified to do what they want to do. The kid fails all his tests and never turns in homework? Hey, he's still a high school graduate. Let his boss suffer.

For many years, my CCNY degree was worthless, because anyone could get one. Whether they could pass the tests, or not even sign their name, mad no difference. That little escapade has changed. Maybe some day a ham ticket will mean something again too. Right now all it means is that you took the time to apply for it.

>> >but you clearly hate what the ARS is

>> If he hated it he wouldn't care what it's become.

>he hates the ARS today his manner makes that plain

>>He cares because he
>> DOESN'T hate it.

>no he thinks or igmagine he can hijack it

It's BEEN hijacked - he's trying to get it back.

>> >and you would enact a sytem that would kill they ARS as it is if you
>> >had the power
>>
>> There were plenty of hams when 13 wpm was the entry level. A 5 wpm
>> code test and a *real* written test wouldn't kill it, it would just
>> separate those who are willing to do what it takes to be hams from
>> those who just want the license without the work.

>maybe nut the current entry rates sugest otherwise

Correlation isn't cause. Who needs ham radio with cell phones and the
internet? (I spent a lot of my ham effort maintaining an HT so that I
had communications when I was out and about. A cell phone's so much
easier.)

> and He does not
>propose 5wpm and writeen test he prososes 13 wpm and a total lack of an
>effective entry class and elimiating half the current licees and likely
>a lot more than that

Oh, you mean the way it used to be, when there were plenty of hams.

>and any "paln" that involves dumping 300,000 hams right of the bat is
>pretty going to finish off the ARS

Seems to me we had a pretty good ARS when we only has 100,000 hams. If
dumping 300,000 means losing half, it means having 3 times the number
we used to have. How is tripling "finishing off"?

Your opinion, not that of those who can converse in it.

>no such requirement exists indeed if you can read then the question and
>answers are suposed to read to you and your aswers taken down

Languageless? You MUST demonstrate proficiency in at least ONE
language to get a license, even today. A code test is demonstrating
proficiency in two languages - not a major step.

becuase it would be halfing not triplling and to assume it is only
halfing is generous many of the current generald and extra would be
weed out withon 10 years
if ham radio looks like it it is dying we will loose oour bands to
anyone that wants em indded a likely result would losing many of ou r
hf bands bands to literaly an extpanded CB service our vhf and up
would be savaged

and we would be powerless to resist

my opinion yes but also a fact Morse code is no more a language than
Crillic is

it is simply an alphabet

you can exchange a limited amount of info using the stand codes but you
can say "do you walk or run by the sea" in morse to any one that does
not speak or read english first

you are simply spreading ignorance al
>
> >no such requirement exists indeed if you can read then the question and
> >answers are suposed to read to you and your aswers taken down
>
> Languageless?
yes indeed although it easier if you do understand english not required

not suree if you can take the test in spanish  (or other ;lang)right
off but if not now soon I expect it will be possible
```

> You MUST demonstrate proficiency in at least ONE
> language to get a license, even today.

nope no such requirement exists not for techs not generals and not
extras either

indeed you point out the way you can get a license without demtating
skill with english if you simply memroize all the questions and answers
their remains no requirement that you understand the content, that task
is easier if you know english but not a requirement

where is this requirement for lang skill in part 97?

> A code test is demonstrating
> proficiency in two languages - not a major step.

expect you are never required to demostrate profiicentcy in any
language at all
and if you were 2 languages would twice one and Code is NOT a langauage
just an alphabet

Indeeded the ignorance of Hams that spread such tales have been one of
the tools the No Code movement has been using against you

Al,
with all due respect to you as a fellow ham I strongly disagree with your
position. I got my ticket the so called "right" way. I've held an advanced
(WA4***) class since I had to drive to the nearest office for for the
written and cw.
Remember when the dam questions weren't even allowed to be published?
Remember those stupid ass ARRL study manuals?Al,how was that better?
Remember when the Dick Bash system came along? As I remember new hams would
mail Dick the questions they remembered and a crude study manual slowly
developed into a pretty accurate (for the time) guide.
Then guys started passing using the system. The "real" hams figured the guys
who used the Dick Bash system weren't real hams "like them". Because they
passed the "right" way and the new guys were, well, you know, what you say
about the techs now.

       Computer crashed, had to replace hard drive.

       My BC898T  and  ARC898 Software had to be reinstalled. No longer
have the passwords.  Uniden & Butel (who I purchased the software from)
will not give me the passwords that I already paid for - to reinstall
the software.

Would greatly appreciate the passwords for these programs

Thank you

========================
You probably mean 'shame on the users' who haven't got a clue.

By the way it is the same situation here in the north of Scotland .
Driving in Inverness you can freely access WiFi points allover town
,from commercial companies to hotels..........but not at locations where
you would expect it ....like 'Starbuck' and bookshops like 'Borders'

Also in California you have to pay for WiFi access at
Starbuck.........must constitute a increasing part of their
income,considering the number of people with laptops.....usually without
a coffee..

I know ,I know ...life isn't a freebee

This will go on until the Scotish police start doing what the English do.
They track traffic at the ISP level looking for "kidde porn". Once they
find it, they locate the person sending or receiving the files.

They have no trouble getting a warrant and come in and arrest the owner of the account and confiscate their equipment.

As soon as they do this, "users" will go looking for unencrypted networks and use them, if they don't know I don't know Scotish law, but in most places the owner of the network is responsible for what is done with it.

There was a case in Canada of a man found driving five miles per hour in a residential neighborhood. When the police stopped him, his pants were around his ankles and there was a laptop on his lap.

Canada unlike most places has a law prohibiting using other people's internet connections without permission. Most places don't.

Geoff.

No Al, CW is a mode not a language. Are you seriously this ignorant?
Just about any language on the planet can use the mode CW which makes it
not a language.

You people that keep trying to make CW something it's not amaze me.
It's not a god, it's just a old mode.

I think you have to refer to people like Al as "Code Nazis" as they want
to force it on everyone, they try to make it into something it is not,
they think code is a cure for what ails the amateur service, and the
only way to salvation is through the code. Anyone who is not on the
code bandwagon is unfit for the amateur service and needs to be eliminated.

"All hail the code!" - NOT!

>> >but it is load of bullto say Morse is a language

>> Your opinion, not that of those who can converse in it.
>my opinion yes but also a fact Morse code is no more a language than
>Crillic is

Yes, I know your opinion. That still makes it just your opinion.

>it is simply an alphabet

No more than ASL is "just an alphabet". (BTW, those who actually
study the subject consider both Morse and ASL to be languages.)

>you can exchange a limited amount of info using the stand codes but you
>can say "do you walk or run by the sea" in morse to any one that does
>not speak or read english first

Neither can you communicate with someone in ASL if they don't
understand English. So? That still doesn't stop ASL from being a
language.

>you are simply spreading ignorance al

That you don't know something doesn't make it the ignorance of others.

>> >no such requirement exists indeed if you can read then the question and
>> >answers are suposed to read to you and your aswers taken down

>> Languageless?

>yes indeed although it easier if you do understand english not required

So if you don't understand English you can still answer English
questions. Interesting.

>not suree if you can take the test in spanish

I'm sure - you can. But one thing's for sure - it has to be in SOME language.

>> You MUST demonstrate proficiency in at least ONE
>> language to get a license, even today.

>nope no such requirement exists not for techs not generals and not
>extras either

Stop arguing and start thinking. Your claim - that one doesn't have
to know any language to pass the test - is nonsense.

>indeed you point out the way you can get a license without demtating
>skill with english if you simply memroize all the questions and answers

In what language?

>their remains no requirement that you understand the content, that task
>is easier if you know english but not a requirement

You can understand the content if you don't understand any language?
How?

>where is this requirement for lang skill in part 97?

Part 97 itself.

>> A code test is demonstrating
>> proficiency in two languages - not a major step.

>expect you are never required to demostrate profiicentcy in any
>language at all

Which you are. You're just arguing, not thinking.

>and if you were 2 languages would twice one and Code is NOT a langauage
>just an alphabet

Again, your opinion, not the opinion of language experts.

>Indeeded the ignorance of Hams that spread such tales have been one of
>the tools the No Code movement has been using against you

The reason the FCC is dropping the code requirement has absolutely
nothing to do with any "movement" or any lame argument like "you don't
have to understand any language to pass the test".

Any language can be signed - but ASL is a recognized (by the experts) language. Which nullifies that argument.

Calling all trucker/hams:

The Vintage Flying Museum needs your help!

A generous ham has agreed to donate a complete BC-375-E radio transmitter setup to the Museum, which we plan to install in our B-17G Flying Fortress, 44-8543A, N3701G, "Chuckie". Unfortunately, the equipment is located in Mansfield, Massachusetts, and the Museum is located in Fort Worth, Texas! We are looking for someone in the transportation business who would be willing to donate their services and transport the equipment for us. The load would be on one standard shipping pallet, stacked about 4' high, with a weight of probably 200 pounds or so. The donor is under a deadline to move the radios out because his job is transferring him overseas later this summer. We are a 501(c)(3) tax-exempt organization, so we can provide a tax receipt for the value of your donated services.

If you can help, or you know of someone who can, please
contact me directly via email > > > k5dh@qsl.net

Thanks and 73,

Dean Hemphill, K5DH
Volunteer B-17 Crew Member
Vintage Flying Museum

>> if they made 20 wpm, or digital mode testing, a yearly requirement.

>yes you wold have to deal with thresult of ruining the ARS

No, I really don't care that my license really means nothing these
days, and will mean even less in the future. I can operate on those
frequencies, and those modes, that I want to use, and talk to those
people I want to talk to. Whether new hams need CW or not.

>> The biggest problem would be freeing up a day to get to wherever the
>> test was being given.

>and having any freqs left to operate on

That has nothing to do with CW - that's set by international
agreement. Do you really think that if we had "only" 300,000 hams,
we'd lose our frequencies?

>lots of differences but at least I am in touch with the real world

Thinking that robbing a bank is earning money? Not very much touch.

>> >so it is cheating it still is obtaining a license

>> That's about what it's come to these days, isn't it?

>that offer was 30 years ago

Oh, I didn't notice. I was licensed for years by that time. I've
never been "offered" anything by the FCC.

>> It's BEEN hijacked - he's trying to get it back.

>> Oh, you mean the way it used to be, when there were plenty of hams.

>vs the the preusre exerted for our bands

The number of *US* hams has very little to do with what bands are
internationally allocated to hams. Especially these days, when US
prestige has sunk so far.

>> >and any "paln" that involves dumping 300,000 hams right of the bat is

>> we used to have. How is tripling "finishing off"?

>becuase it would be halfing not triplling and to assume it is only
>halfing is generous many of the current generald and extra would be
>weed out withon 10 years

300,000 is half of 100,000? What kind of arithmetic are you using? I can't seem to get my calculator to make it come out that way.

>if ham radio looks like it it is dying we will loose oour bands to
>anyone that wants em

Your opinion - again, the world at large doesn't really care too much what the US does these days, as far as number of hams.

> indded a likely result would losing many of ou r
>hf bands bands to literaly an extpanded CB service our vhf and up
>would be savaged

That has nothing to do with frequency allocation. Learn how the ITU works before you make such funny assertions.

>and we would be powerless to resist

We ARE pretty powerless to resist now - but whether we keep a CW requirement has nothing to do with the ITU. They couldn't care less.

CW is not a language, it is a mode. I think what is being confused here is
Morse code, and in particular much of the Morse shorthand used in the CW
mode (and, for that matter, in much of phone mode as well). Those ARE a
language of sorts.

No, I mean shame on the wireless hardware companies, as I wrote, for
such a gross disservice to their customers -- it shouldn't be necessary
to be an IT expert to use Wi-Fi safely.  It should just work properly.
Otherwise it's not ready for the market.

bullshit you realy are unamerican the No code movement has showne we
have the powerthe chnange to change interantional law and national
rules on this subject

Maxim and his crowd shown we could change mnds in officaldom after WW 1
when some folks did not want us back on the Air at all

people have power man wake and smell what you are shoveling

they are a jargon but they can comincate the rnanage of expression
twith someone that does not share with the same underlying language
that Al needing to glofiy his favortie mode chooses to over look it's
limits (and prehaps it has no limits for him and can indeed express
everything he wants to express on the air)

all that is required is getting the right answers down on the answer sheet

how the test taker manages that (other than cheating) is up the take of the test one of the options

understanding the lang of the question is merely one or the options the best one for the ARS but for example MY wife did not understand some the question on her tech test using the fact I know something of how the test is asembled and graded she was able to fill correctly some of the ansers by looking for a patern in the in answers of the questions she could understand without this test taking skill (avarient of skill taught in some corners for passing other tests) she would not be a ham today

and yet she was able to help set up at FD this year and make some contact and has been able to devolpe soe of the skill needd in the ARS, enough to be complmented on her skill duiring reccent local emergency here in the area. i was busy geting theour aux power back online and adjusted to the loads I wanted carried and she used the radio (and helped by reading a a few reading fromt he station back to me as I worked on stablizing our household systems

My wife does not understand a great deal of the content of the messages she relayed, such understanding was not required in order to be of assitance

On her own she has slowly been feling her way into the preveldges offered by her license, amsuingly to those that know me she is developing some talnet for Morse Code and and has been making a qso's in that mode but due being still clumsy and a more than bit of test anxiety has been unable to pass a test that and the fact the tone the arrl uses gives her a headache and the ARRL will not alow another tone to used without the report of an audiologist (at a cost of about 2k) means she will wait tille the FCC acts to get an HF license like I am waiting

Of course CB is better for road reports. What's your point?

Mr Bill

A rather lengthy thread contains erroneous claims on the above topics. Morse code is not a language. Language is communication of thoughts and feelings through a system of arbitrary signals, such as voice sounds, gestures, or written symbols, with such a system including its rules for combining its components, such as words. The words are the language. Morse code is the alphabet just like A, B, C ... Z are the alphabet. It is nothing more than the building blocks used to compose the words that actually are the language. English, French, Spanish, German etc. are languages. Hello, bonjou, ola, and hallo are alphabetic symbols combined to form a word meaning the same thing in the various languages. It doesn't matter if the word is written, transmitted orally or by CW, it is still just a string of characters that only becomes language based on the knowledge of the sender to combine them in the proper sequence and the recipient to translate it and receive the intended communication. Neither the alphabet nor morse code are languages.

Proficiency is having or marked by an advanced degree of competence, as in an art, vocation, profession, or branch of learning. One could extend that to include competence in an avocation or hobby. Our narrow minded and singly focused friend claims an operators ability to use code makes him more proficient. That is patently false in many cases. It is the overall competency that is the determinant. The operator with code skills may be excellent at code and know nothing of PSK, digital, satellites, EME or any number of things while another operator can expertly use any of them but doesn't know code. They may both be proficient operators, just in differing modes of operation. Then again, neither may be a proficient operator. They may barely know enough about their equipment to get it to do what they narrowly focus on doing. A third operator who perhaps doesn't know code and only knows SSB operation may be the proficient operator who knows his equipment well and can quickly and easily adjust it to perform at peak efficiency in his operating mode.

It boils down to code being nothing more than another operating mode which isn't a language and isn't a gauge of proficiency.

Right, and how do you send CW while driving your pick-up truck with the
twin talkers -and- the on the air lights mounted on the roll bar? It's bad
enuff running around with the 102" whip banging off everything low, let
alone trying to tap out some directions to your ham buddy on the highway
via CW. :)

CW rules in disasters tho..

As best I recall CW is illegal on CB. Naturally, if the average CBer
knew that, there would be a rush to learn it. :-)

Mr Bill

Rash or rust?

Reckon where Riley will rate a CW on CB bust? :)

 (i think it's legal at small wattage) no?

Thanks, guys. I fooled around with it over lunch today, and don't
recall exactly which comination of key strokes got me there, but I
twisted the knob and got the PL over to 123.0.

Unless .... one is trying to communicate with another "code" station ...... I don't buy the language aspect ...in fact this discussion has been beat to death years ago ...... what is proficient ???? 5 WPM yep it is if you are working another 5 WPM station .... 40 WPM yep if the other fellow is 40 WPM "proficient" ...as stated many times before ....my "proficiency" unravels like a cheap sweater around 40 WPM or so. PS to keep this in the realm of equipment ......
how does the FT-897 act with the Collins CW filter ...worth if for and backup and field day ????

Take care all ...73   Tom Popovic KI3R

Can't you spell any better than that?

So, Al. Can you tell us how many receivers or transmitters have you built from scratch? Not from a kit, or someone else's design, but from scratch? Drew a block diagram that was converted to a real schematic one block at a time where you did all the math, laid out the chassis, cut and drilled all the holes and built the equipment all by yourself?

What is the biggest transmitter you've ever built or used? I'm a disabled now, but I worked in broadcast, and built telemetry equipment that is in use all over the world, and in orbit. Tell us, what can you do other than whine? Have you ever built a commercial TV station from scratch? Have you ever maintained a 5 MW EIRP UHF plant with a 1700 foot+ tower? Had the fun of finding parts for a transmitter that haven't been made for 15 years while managing to stay on the air?

I found CW boring years ago, and have some hearing problems so I said to hell with Morse code and got involved in the equipment design end of things. It was more fun for me to develop a design and built it, get it aligned and working, then move on to the next design.

it is legal at part 15 wattage but not at legal cb power let alone the
poser a ham staion can use it as

amsuingly I thought CW was legal on CB till Robeson disabused me of
that notion

it was interesting that he dt not realy seize upon that mmistake on my

```
part (a real one for a chnage as opposed tothe faults he merely
igmaines)

Better? I don't know. Who said it was?

But how many hams today could even understand a schematic, let alone build a W2EWL rig? But how many SSB (or DSB) transmitters were homebrew? Hams don't even build repeater controllers any longer - everything is appliance. What's ham radio supposed to be (from the government viewpoint) if not a training ground? For people who know how to operate. Not for CBers on ham bands.

People are afraid of losing things if we have too few hams? Where will the FCC's justification go (the "ham radio provides us with a pool of experienced operators" thing) if ham radio is just CB on different frequencies?

This is probably the Yaesu WIRES (internet-connection) feature. It's
enabled by pressing the lefthand VOL knob briefly. When enabled, the
text INT ON appears in the display for a couple of seconds, an "int"
icon appears in the display (memory-channel field of the subband part
of the display), and a DTMF tone is sent at the beginning of each
transmission.

To disable it, press the lefthand VOL knob again, and confirm that the "int" icon disappears from the display.

Ok, then it HAS to be that you have the WIRES activated. Every time you key up,
it sends a tone code to initiate the WIRES link...

No, please tell us how requiring code tests and more difficult technical testing creates a "more proficient" ham?

When code testing was 13/20 WPM and the technical tests were much harder, we still had all the idiots on the bands. Those idiots are not more proficient. You are simply ignoring reality. Do you live in a cave or something?

Hi there,

All stuff related to equipment can be found cheaper on auction sites.
Find out how, tips, tricks and links to the most popular auction sites on:

http://auctions.woohoow.net

Good luck!

I am sure you guys have solved the problem. I will talk with Bill
later today. This "feature" has just about driven him off his recent
return to Ham Radio!

While we have found the experience a bit humbling, I do think they
could have done better job with the manual. A search on "wires" of
the PDF manual got me on the right pages.

Thanks to all!
 John W8CCW

Not a dumb question, but sure as hell a DUMB feature
Tis Wires beep necessary when using WIRES (Wide-Coverage Internet Repeater
Enhancement System).
To disable, press the volume control on the lower left of the rig. See page
52 of the manual
http://www.yaesu.com/

We had a demo station at the San Diego Fair that beeped every time they
transmitted
Almost every time a repeater cop just had to tell them - ya gotta beep on

your signal

Using the on-line manual - took two hours to figure out how to disable it

And if you think that is dumb -- wait until someone uses the ARTS feature on your repeater
ARTSTM: Auto Range Transponder System .... page 46

--
CL -- I doubt, therefore I might be !

The claim was "more proficient", not "generally nicer and better able to get along with people". There will always be idiots in <insert any field> but a ham who can't copy code at 1 wpm isn't more proficient (or as proficient) at communicating under any and all conditions as one who can.

Someone who can do something is, by definition, more proficient at doing it than someone who can't. Requiring code tests and real technical testing (the current tests are a joke) makes sure that most of the people who get licensed are more proficient at receiving code and with technical matters.

no it does not

most of the people that get license tody never take a code test

therfore they are not made more profeincent at Morse code even

you "facts" are well... fucked

I'm able to switch on/of the T and SQ CTCSS using the function and
ctcss buttons, but how do I get to the location where I can change the
actual tone code?

Thanks in advance.  bb

No, it's your ability to understand the difference between "are
licensed" and "get licensed" that is.

all the tech got lisenced sir
nor does passing the code even ensure that most people that pass it can
operate it

Al, someone who passes a code test should be more proficient in code than someone who cannot pass the code test. That simply makes that person proficient in code, not necessarily a more proficient operator.

You may be able to use the code, but if you cannot use modern digital methods, use sat communication, able to handle emergency communication, able to set up digital networks and use them effectively, build modern solid-state equipment, etc., then you are not a more proficient amateur operator, you just are more proficient in code and that is not going to help us much in the 21st Century.

As I said before, PSK31 can be copied when the human ear cannot even hear the signal, if you cannot hear code, you cannot copy it period. So code is no longer the be-all-end-all. Modern 21st communication methods have replaced it.

If we are going to attract new people to the service, we need to get into the 21st Century and get the old farts away from the old code and tubes crap.

Al Klein wrote:
>

should be? I beg you pardon

well I know can't pass a code test and I can use Morse code did a few
eme contacts using a spectrograph to make out the didt and dah and
feedto an pc for translation I have done the same (with code reader as
well) to see if I could do that made a sweep in a cw sweepstakes (with
aid of another hams call)

>

Setting up digital networks may not be particularly practical in the early days right after a large scale disaster. Satellite passes are short and if you don't have internet access to look up pass times, you may be up the proverbial creek without the proverbial paddle if you rely too much on that form of communications. Even with the pass info, the passes are too short to be useful for handling very much emergency communication.

> As I said before, PSK31 can be copied when the human ear cannot even hear the signal, if you cannot hear code, you cannot copy it period. So code is no longer the be-all-end-all. Modern 21st communication methods have replaced it.
>

Yes it is true that PSK31 can be copied when you cannot hear it. However, it is useless when there are ionospheric disturbances that cause phase shifts (solar flares with the attendent aurora come to mind). This happens on a fairly regular basis. In addition, although the signal you are putting out is low power, PSK31 has a fairly high power consumption requirement since a computer is essential in the system. If you have limited power resources, it may not be a wise choice.

While code is not the end-all and be-all, it still has its place in list of communications methods. Let us go back to the auroral activity. The various digital modes fail first. Voice holds up a little bit longer getting distorted but sometimes still copyable. Code holds up a bit longer, being still copyable when voice becomes too distorted. Under auroral conditions, both voice and code fare better than digital.

Every single method has a valid place in the list of communications methods. Every mode has its strong points and its weak points. In my opinion, hams should be able to use as many modes as possible and that includes code.

The major drawback to code is that it requires people to develop a skill rather than being a matter of just slapping parts together. Heck, I don't any skill in soldering as I've soldered only about 4 items in my life but I built both myself and my OM PSK31 interfaces in about 1/2 hour each. They were two of those four items.

> If we are going to attract new people to the service, we need to get into the 21st Century and get the old farts away from the old code and tubes crap.
>

I find that it is the "old farts" who are doing most of the exotic activities. When I work PSK31, I come across many seniors working this mode with the latest radios and computers. When I work VHF/UHF contests and look up the call signs afterwards, it is mostly the experience hams that I run across.

You have let your disdain for the code blind you to its merits. As I stated above, EVERY mode has its strengths and weaknesses and its place in wireless communications.

Dee, N8UZE

Dee, the issue is that many old hams know CW, but cannot operate most new digital modes. But if I understand what you are saying, if a 20 WPM Extra Class ham only operates CW and maybe SSB is less proficient than a 5 WPM Technician that operates on 10 different digital modes. See the 10 modes is more than CW and SSB, that ham is more proficient. Then I guess I agree with you.

Your comments on setting up networks, sat communication, and digital modes show that you have little knowledge on either. For instance, it depends on the sat orbit how long it is useful.

If PSK cannot be used due to ionospheric disturbances, well then either can CW. Computers can be operated on battery or generator. You are going to need something to power the radio right? Does not take much more for a laptop and with digital modes, the power can be much less so there is more power for the laptop.

Your comparison of voice, digital modes and CW shows you have little knowledge of what you are talking about. I have personally used digital modes when voice and CW were not able to be copied.

Finally, I happen to like CW a lot. But I don't think it makes anyone a better operator for knowing it, you should not be tested on it anymore than any other mode. Yes, there are a lot of seniors using digital, but there are too many more hanging on to the old crap CW only and tubes.

The original claim wasn't that it makes him more proficient in everything, just that it makes him a more proficient operator. Being equal in everything else, but more proficient in code, makes one more proficient.

Is logic a lost art?

>You may be able to use the code, but if you cannot use modern digital

And, if there's effectively no testing, which is the current case, how do you propose that we get operators who CAN "use modern digital methods, use sat communication, able to handle emergency communication ...", etc? Wishing makes it so?

>As I said before, PSK31 can be copied when the human ear cannot even
>hear the signal, if you cannot hear code, you cannot copy it period.

CW can be copied below the noise. Whether it can be copied as far below the noise as PSK31 can is a good question. With the amount of experience I have with both modes, I think I can safely say that CW can be copied further into the noise than PSK31 can. (You need SOME detectable original signal for PSK31 to work - after all, you have to be able to detect the phase shift. CW can be copied even if it's nothing more than modulated noise. And, if there are any old sounder operators left, even key clicks can be copied.)

> So code is no longer the be-all-end-all. Modern 21st communication methods
>have replaced it.

It never was all there is, but let's see you use "modern 21st communication methods" in an emergency situation when all you have is a source of RF - nothing to modulate it with. Going to yell at the oscillator and hope it's microphonic enough to produce some NBFM?

>If we are going to attract new people to the service, we need to get
>into the 21st Century and get the old farts away from the old code and
>tubes crap.

They said that in the 50s too - "we have modern communications like SSB - who needs CW?" ... yet CW still lives. I doubt it'll be a requirement in 100 years , but I also doubt that no one will be able to copy it.

Thanks for the memories. I enjoyed "the barrel" in the late '50s. No
one who works voice on aurora will ever forget what it sounds like. Or
forget working half-way across the country with 5 watts on 6 with a TV
antenna.

>The major drawback to code is that it requires people to develop a skill
>rather than being a matter of just slapping parts together.

The problem is that a lot of people think that all the "skill"
operating takes is being able to turn the equipment on. Even using an
appliance rig, it's easy to tell the appliance operators from those
who have developed some skill.

>> If we are going to attract new people to the service, we need to get into

I'll second that - from the old fart side. :)

>Dee, the issue is that many old hams know CW, but cannot operate most
>new digital modes.

And many of us know CW, originated some digital modes (you think teen-agers invented everything?) and can certainly operate most, if not all, of them. We had working RTTY (that's digital) regenerating repeaters (thanks, Norm) before most current hams were even born.

>If PSK cannot be used due to ionospheric disturbances, well then either

>can CW.

Not true - the human brain is a more efficient detector than a computer sound card in some cases.

>Computers can be operated on battery or generator. You are
>going to need something to power the radio right? Does not take much
>more for a laptop and with digital modes, the power can be much less so
>there is more power for the laptop.

You can get a CW signal to anywhere in the world with a 9 volt battery for a few hours. You can't run a pocket PC on that kind of power.

>Your comparison of voice, digital modes and CW shows you have little
>knowledge of what you are talking about. I have personally used digital
>modes when voice and CW were not able to be copied.

And I have personally used CW when digital modes weren't even detectable, let alone copyable. So have many people who have used CW for extremely low signal work. Try decoding a PSK signal that's been bounced off an aurora. (The phase is constantly rolling - there's nothing for the detector to detect.) Aurora CW sounds weird (okay, it makes "weird" boring), but it's easy to copy.

>Finally, I happen to like CW a lot. But I don't think it makes anyone a
>better operator for knowing it, you should not be tested on it anymore
>than any other mode.

Okay - the same then. You're tested on your ability to understand English, and to read the written word - that covers voice and digital. Let's test for CW. Not "more", just "same".

> Yes, there are a lot of seniors using digital, but
>there are too many more hanging on to the old crap CW only and tubes.

And too many youngsters who think that it it's old it's automatically crap.

I still hold to the belief, claim, whatever that knowing CW in itself,
does not make an operator more proficient in anything but CW. I would

even submit that some operators who only use CW are less proficient
operators than a modern ham who uses many more modes and methods,
including modern digital modes, to communicate. Follow the logic Al.
Someone who is versed in more facets of Amateur Radio than simply CW is
a more proficient operator. Yes, I guess you are correct, logic is a
lost art.

> methods, use sat communication, able to handle emergency communication
> ...", etc? Wishing makes it so?

No, desire does. Every amateur has their niche that they want to
pursue. Forcing a CW test on someone does not make them have a desire to
use it. In fact, forcing someone to test on an archaic mode of
communication may in fact keep them away from the service and therefore
they will never develop an interest in learning and using modern
communication methods.

Al, you seem to have trouble reading. I never mentioned copying below
the noise level. What I said was CW cannot be copied if the human ear
cannot hear it. I have copied PSK when the audio of the signal could
not be copied by the human ear. It's just that simple. All the BS
about CW being the only true weak signal mode is well just BS. There
are superior modes to CW and PSK is one of them.

Yup, if all you have is a source of RF and nothing else, I guess you are
screwed.  But that is not reality.  You would have a real problem if you
did not have a source of RF, gee Al, let's call it a transmitter and use
big people words.  I wonder why NASA does not have CW capability on the
Shuttle and Space Station - you know, just in case.  Why have our armed
forces stopped using it?  What happens in war if all they have is a
transmitter?  Get real.

Yup CW still lives and it will go on for quite awhile.  Forcing people
to learn and use it is not the way to keep it going.  It probably won't
be a requirement in 5 to 10 years.  I guess that is just evolution.  Out
with the old and in with the new.

>I still hold to the belief, claim, whatever that knowing CW in itself,
>does not make an operator more proficient in anything but CW.

Next you'll tell us that the sun rises in the East. Thank you,
Captain Obvious.

Knowledge of any single thing doesn't make an operator more proficient
in anything but that one thing. Should we have testing in TV
techniques, simply because it's a "modern communications mode"? How
about microwaves? Programming? Hey, there's one I'd go for. Let's
be "modern" and make sure that hams can program the computers they're
using for "communications".

> I would even submit that some operators who only use CW are less proficient
>operators than a modern ham who uses many more modes and methods,
>including modern digital modes, to communicate. Follow the logic Al.

>Someone who is versed in more facets of Amateur Radio than simply CW is
>a more proficient operator.

Someone who is versed in more facets of amateur radio than simply
modern digital modes is also a more proficient operator. Can YOU set
up an internet audio stream without following a set of instructions?

> Yes, I guess you are correct, logic is a lost art.

And you proved it again.

>>Wishing makes it so?

>No, desire does.

A distinction without a difference.

>Every amateur has their niche that they want to
>pursue. Forcing a CW test on someone does not make them have a desire to
>use it.

Neither does forcing them to take a test in "modern digital modes".

>In fact, forcing someone to test on an archaic mode of
>communication may in fact keep them away from the service and therefore
>they will never develop an interest in learning and using modern
>communication methods.

And forcing someone to test on a "modern digital mode" may in fact
keep them away from the service and therefore they will never develop
an interest in learning and using CW.

>Al, you seem to have trouble reading. I never mentioned copying below
>the noise level. What I said was CW cannot be copied if the human ear
>cannot hear it.

And I said it can, so who has the problem?

>I have copied PSK when the audio of the signal could not be copied by the human
ear.

And I have copied CW when there wasn't enough signal for a computer to
copy PSK.

>It's just that simple.

It sure is.

>All the BS about CW being the only true weak signal mode is well just BS. There
>are superior modes to CW and PSK is one of them.

No one said that CW is the only weak signal mode, but it can sometimes
be copied when it's weaker than any other mode can be copied. If the

noise frequency is higher than the bit frequency ... well, you know weak signal analysis, right? Or you wouldn't be discussing it, would you?

Oh, but CW takes MUCH less power for the same path than any digital mode, and CW is the ONLY mode you can use when the only thing you have is a source of RF.

>Yup, if all you have is a source of RF and nothing else, I guess you are
>screwed. But that is not reality.

Until you have a radio with a broken voice or data circuit and the only thing standing between you and safety is your inability to communicate because the radio's broken.

>You would have a real problem if you
>did not have a source of RF, gee Al, let's call it a transmitter and use
>big people words. I wonder why NASA does not have CW capability on the
>Shuttle and Space Station

Excuse me? They sure do.

>Why have our armed forces stopped using it? What happens in war if
>all they have is a transmitter? Get real.

You're comparing military intelligence to actual intelligence? They die. Soldiers have been known to do that in combat. The prime mission of the military in wartime is NOT saving the lives of individual soldiers, it's winning wars at the COST of the lives of individual soldiers. Why don't YOU "get real"?

>Yup CW still lives and it will go on for quite awhile. Forcing people
>to learn and use it is not the way to keep it going.

Neither is forcing them to learn electronics. Or the laws they're going to have to know. Let's just post ham licenses in stores and people can pick them up if they like. Just like they used to do with CB licenses. Why keep anyone from having access to a public property? Just let anyone buy a radio (no knowledge of how to even build a kit should be required) and use it. Those of us who want to learn something can petition for a new service that requires actual knowledge of something.

you are the one that failed the class

I did not

CW currently stands as more imprtant than the rest of HAMradio combined
for HF access

CW is not anyway near that valuble

therefore the current testing system is ilgoical

BTW to answer your red herring from another thread No one is proposing
adding a test on digital mode

I am a new ham and will respond to this based on being new. I got my license last year at age 48 so I'm neither a kid nor a senior. I've been tested and scored at 136 so I'm not a genius but am far from a dummy. I mention these things to give a general picture of who I am and where my position comes from.

Radio Buff wrote:

>
> No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Although I see the reasoning behind this request I disagree. There are older hams who wouldn't be able to pass their license class test but who still enjoy participating in their nets and talking to their circle of ham friends. I don't want to be the one to take that away from a senior ham who is hurting absolutely no one by enjoying their hobby. The fact they might not pass the Extra test means nothing.

Radio Buff isn't going to want to give up enjoying radio when he/she is older and can't pass the exam either.

>
> The passing score for written exams needs to be raised to 85%.

I have no problem with this provided the exam is similar. If you want to raise the minimum score required while also increasing the difficulty level of the exam by 20-25% the combination will make it too difficult for many. You will kill amateur radio because there will be far fewer coming into the hobby than going SK.

>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.

Code should not be a part of the license test anymore than PSK or any other operating mode. There are so many different ways to enjoy and utilize amateur radio today that were not available decades ago that make code no longer a necessity. Mandating code skills is now similar to mandating slide rule skills for an engineer. It is an excellent tool and anyone capable of using it has a true skill. That said, there is nothing that can't be done by one without slide rule skills. They may be at a disadvantage at certain times and in certain specific locations and scenarios but for the most part the individual with the slide rule skills has no true advantage today as they did a few decades ago. The same holds true with code.

I do believe there should be a segment of the bands each license class is authorized that is reserved for those with code in their license. It just shouldn't be a requirement any longer. It keeps otherwise intelligent and capable people away from the hobby and the goal should be to bring them in not keep them away.

>
> Make the no-code license one year non-renewable.

This point is pointless with the sensible approach outlined above.

I guess he don't want to be proficient either. Happy appliance operating.

Yes it does mean something. It means they're appliance operators. They pass their exams once then forget everything and don't want to advance themselves anymore or be proficient hams. They're not an asset to the service, they're just lazy asses with licenses and only want to operate appliances.

> Radio Buff isn't going to want to give up enjoying radio when he/she is older and can't pass the exam either.

If I can't pass the tests, I don't deserve a license, or renewel. I don't get to operate if I can't qualify. It's that simple. You people think that if someone can't pass a test, they should get the license anyway. It's a government handout just like how you get your welfare checks and food stamps in the mail at your project housing. Your Democrat party outcome based thinking is what is distroying Amateur radio and America. Everyone is equal and if you want to excel and improve yourself there is something wrong with you because your not supposed to want to do that.

>>
>> The passing score for written exams needs to be raised to 85%.
>
> I have no problem with this provided the exam is similar. If you want to raise the minimum score required while also increasing the difficulty level of the exam by 20-25% the combination will make it too difficult for many. You will kill amateur radio because there will be far fewer coming into the hobby than going SK.

Quality or quantity? You people that want things easy always say requiring more qualified licensees will kill the service. You're against quality because it require you have to work a little. Well, If you ever need radio help in an emergency to save lives & property, and the ham operator you talk to on the other end is an incompetant retard, I'll bet you'd wished for quality then.

>>
>> Code elements should be 13 wpm for General, and 20 wpm for Extra.
>
> Code should not be a part of the license test anymore than PSK or any other operating mode. There are so many different ways to enjoy and utilize amateur radio today that were not available decades ago that make code no longer a necessity. Mandating code skills is now similar to mandating slide rule skills for an engineer. It is an excellent tool and anyone capable of using it has a true skill. That said, there is nothing that can't be done by one without slide rule skills. They may be at a disadvantage at certain times and in certain specific locations and scenarios but for the most part the individual with the slide rule skills has no true advantage today as they did a few decades ago. The same holds true with code.

Yah, we can't require quality or skill for a license. I know you're right. We gotta be like CB'ers.

> I do believe there should be a segment of the bands each license class is authorized that is reserved for those with code in their license. It just shouldn't be a requirement any longer. It keeps otherwise intelligent and capable people away from the hobby and the goal should be to bring them in not keep them away.

Code isn't a requirement, you can always talk on CB, FRS, and cell phones all you want.

>>
>> Make the no-code license one year non-renewable.
>
> This point is pointless with the sensible approach outlined above.

No, it's not pointless. It insures licenses will improve and will be valuable to the service. I know you would hate that because in another month you would either have to upgrade or loose your ticket.

Doesn't anyone else here want to save ham radio? I'm getting tired of arguing with the lazy asses. I hope some of you cared and want to help me save ham radio enough that you emailed this to President Bush, your Senators and Congressmen to press the FCC does the right thing for us:

No more automatic renewals. Individuals must retest and pass all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code license one year non-renewable.

73, Thanks for your support.

Markie,

I'm not throwing you off the bands. You're throwing yourself off. You have to pass a test for the privileges. If you can't pass the test like Techs used to have to pass, you get no privileges to operate and have to go back to CB with everyone else that can't pass a test and acts retarded. You earn privileges, licenses aren't totally free handouts from the FCC yet, as much as you people wish they were. No one is throwing you off the bands. You being a lazy ass that can't spell and don't want to learn gets you thrown off the bands. The no-code license was a bad idea to begin with anyway. You couldn't have got licensed under the old system. You and Sal M. Onella would still be talking yourselves on CB and pissing off truck drivers.

no you are merely proposing to

>You're throwing yourself off.

nope you are propsing to have the FCC do so

>You
> have to pass a test for the privileges. If you can't pass the test like

```
> Techs used to have to pass, you get no privileges to operate and have to
> go back to CB with everyone else that can't pass a test and acts retarded.
> You earn privileges, licenses aren't totally free handouts from the FCC
> yet, as much as you people wish they were.
I already earned those prevlidges you want to propose that they be
revoked for no valid reason

fortunately the FCC will NEVER go for it
> No one is throwing you off the
> bands. You being a lazy ass that can't spell and don't want to learn gets
> you thrown off the bands.
now you are just lying
> The no-code license was a bad idea to begin
> with anyway.
perhaps it was (I don't agree it was but I will grant it might be)
but it is 20 years too late for that discussion
>You couldn't have got licensed under the old system.
Acualy I could have gotten one

by simply accepting the offer of those testing to lie and say that I
tooked the recieve I passed one and tranmtiing test I took a month
later and passed (while failig n that day ) and claim they taken and
passed the same day

I certainly could gotten a license I was merely too honest
>You
> and Sal M. Onella would still be talking yourselves on CB and pissing off
> truck drivers.
I still use CB when it serves my needs as I also use mMURS and FRS when
they suit

but you clearly hate what the ARS is

and you would enact a sytem that would kill they ARS as it is if you
had the power

that makes you one real sicko

no I say throwing at least half the current memebers of the ars off the
band would kill the service
>You're against
> quality because it require you have to work a little.
nope I worked a lot for the novice I was neer able to get

> Well, If you ever

> Yah, we can't require quality or skill for a license.
sure we can

this has nothing to do with Morse Code testing however
> I know you're right.
> We gotta be like CB'ers.
nope
>
>
> > I do believe there should be a segment of the bands each license class

indeed code WILL not be a requirement verysoon

deal with it
>
> >>
> >> Make the no-code license one year non-renewable.
> >
> > This point is pointless with the sensible approach outlined above.
>
> No, it's not pointless.
you got that right the point is that you want to kill the ARS becuase
it has eveoled
> It insures licenses will improve and will be
> valuable to the service.
nope
> I know you would hate that because in another
> month you would either have to upgrade or loose your ticket.
nope

I do hate the ioidea of yet again taking prevdeges away form operators
that Have earned them I think een the ARRL and FCC learned that lesson
year ago
>
> Doesn't anyone else here want to save ham radio?
Sure I want to save it

you don't
> I'm getting tired of
> arguing with the lazy asses.
then do your self a kindness and stop you are not helping the ARS
except for contuiing to prod the No Coders into pushing the FCC to stop
the bleeding your kind hae created
> I hope some of you cared and want to help me
> save ham radio enough that you emailed this to President Bush, your

> Senators and Congressmen to press the FCC does the right thing for us:
Indeed I did email your thought to a freind on the white house staff

I reported on the laughter that rsulted
>
> No more automatic renewals. Individuals must retest and
> pass all elements required for their license class.
not bad but not likely since it will rsult in prevledges being taken
away from those that EARNED them
>
> The passing score for written exams needs to be raised to 85%.
if you like
>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.
suicide for the service and will never be enacted by the FCC they have
ejuected anything that takes prevedlges awayfrom people
>
> Make the no-code license one year non-renewable.
and the final

throwing half of the ops currently licensed would insure the loos of
most if not all of our spectrum

is it just that simple
>
>
> 73, Thanks for your support.

> Why not a used K2 or pre-built?

Good idea ..... But I am always a little gun-shy about used rigs I
still have my Eico 723 that I still use that I built in 65 .... The used
rigs I have bought always worked except for .... which invariably
meant my butt was on the stool at the bench. Pre-built ...sort of the same
game ..... Oh well .... Thanks J man ....

True, but the ones that use the dynamic encryption can do a reasonably
good job along with a firewall and router. The golden rule is
"Nothing is bullet proof"

>

One of the locals mentioned doing a bit of "war driving" around town
just for curiosity. About 80 to 90% of the networks heard were
unencrypted AND over half of those _still_used_
the_default_name_and_PW.
I use hard wired Cat5e in a gigabit network as with the amount of
traffic wireless is just too slow even if it is full duplex.

NOTE I only receive the two amateur radio news groups.

Not even in the same universe -- WEP is easily cracked in minutes,
little more than the Emperor's new clothes. Use WPA with a strong
passphrase for any real security.

Yep ... really bad ... shame on the wireless hardware companies!

Wi-Fi is half duplex.

One day I'm on the interstate... snowing real bad. Call out on the usual simplex channels on VHF/UHF to get a traffic/conditions report... no answer. So I grab the "emergency" CB radio I keep under the seat. Call out on Ch 19... got _many_ responses - mostly truckers all with solid info. Very useful - and enjoyed listening to them all help each other.

That day, ham radio lost and CB won.

If you're traveling a long distance and don't want to hear the usual CB chatter - 2 meters and so on is great. For Road reports - I agree - CB IS the answer - hands down. I'd never give mine up........ I installed one in my truck just for that reason. BOTH services have their advantages and disadvantages. I don't think anyone is saying Ham is the "gift from god" when it comes to radio. Even FRS has its place. It all depends on the need and so on.

Earned? By what? Filling out an application? Memorizing enough
answers to just pass the written exam?

>> The no-code license was a bad idea to begin
>> with anyway.

>perhaps it was (I don't agree it was but I will grant it might be)
>but it is 20 years too late for that discussion

It's never too late to correct a mistake.

>>You couldn't have got licensed under the old system.

>Acualy I could have gotten one

It was you who said, "I having never been able to passa code test", so
you couldn't have.

>by simply accepting the offer of those testing to lie and say that I
>tooked the recieve I passed one and tranmtiing test I took a month
>later and passed (while failig n that day) and claim they taken and
>passed the same day

That's not passing, that's cheating. If you're old enough to go to
school you're old enough to know the difference.

>but you clearly hate what the ARS is

If he hated it he wouldn't care what it's become. He cares because he
DOESN'T hate it.

>and you would enact a sytem that would kill they ARS as it is if you
>had the power

There were plenty of hams when 13 wpm was the entry level. A 5 wpm
code test and a *real* written test wouldn't kill it, it would just
separate those who are willing to do what it takes to be hams from
those who just want the license without the work.

>therefore the current testing system is ilgoical

"I can't pass the test" doesn't have anything to do with logic.

>BTW to answer your red herring from another thread No one is proposing
>adding a test on digital mode

Then dropping CW because it's old and no longer used is illogical. Not
that you're capable of figuring out why, but it is.

Well ...

It would probably reduce the total number of hams. But those who just want to buy a radio, plug it in and yell at people can still buy a CB set from RatShack.

It's true what you have posted.
We true amateur ops welcome you into our service with open
arms........really! There are many clubs with varied interest. Our club's
main focus is scatology. Our FD was great! We smeared shit all over
ourselves and then sucked and fucked well into the night! CUM one CUM all!

By all means replace it and forever leave CB behind. While you're
at it don't forget to remove rec.radio.cb from your newsreader.

Seems to me this original question appeared here about 4 months ago or so!
Is it my news reader replaying OR is someone else "reposting"?

he retrolling right along

OTOH since the troll is so stale I am enjoying some of the now well
thought responses as quite clever

hi

I am looking for voice filters and any other accessories for it

Already have the txco

used but working good condition prefered, post here w/item and price and
your contact info i'll get back to you

or you can email me   at   myles dti   net

also looking for coax sweep analyzers and antenna analyzers

tnx

It's the same story over and over. Usually an outcasted ham posts
to rec.radio.cb  in this derogitory manner. It's a amateurish attempt
to self justify their superiorirty. They simple put down others in
order to bring themself up.

The only problem is this. If they were truly superior they would never
feel the need to do this. When they resort to putting CB down it does
just the opposite of what they think. It exposes an inferior feeling
and their self conscienceness to  it.

Maybe it is me, I must be missing "something". I started out with CB - got into Ham AND Electronics due to my admiration of the latter. Both services have their place. Each "does" have it's share of lunatics. There "used" to be a channel here where EVERY NIGHT - about 4 or 5 would do NOTHING but fight. That makes no sense to me. They threatened to fire bomb each other, kill each other, kick each other's ass, etc. It was plain ridiculous. A waste of money on Radio equipment, electricity, etc. I've heard some hams get on air and do just as goofy of things. Me, I prefer to get on whatever band, have a nice conversation and call it a day. Just like any group, be it groups of humanity, cops, "professional driver", doctors, lawyers, etc...... we ALL have our bad apples. That will never cease.

Why not try to "enjoy" life with out the provocation relating to radio - etc. Just because I have an Extra class license - does NOT make me any better than many CBers. There are many who know electronics and just chose to never go get a license. Same with 2 way radio techs, they chose not to get involved. No big deal.
Why cut each other up? JUST ENJOY THE HOBBY......... Cutting each other up, fighing, etc - is NOT "enjoyment".

Screw all the a$$hole answers. Here is the real lowdown:
You will find jerks on Part 95 and Part 97 bands.
You will find fine folks on Part 95 and Part 97 bands.

Three years ago I got my ticket. I found more bands to work plus
my CB. When I can't find someone on 2 meters, I can check out 440.
If that proves to be dead, I can always find someone on channel 19!

Get a scanner and tune from 144 to 148 and from 438 to 450. You may
hear a lot of the same voices on there that you hear on your CB!

Finally, repeaters are great for a consistent long range connection,
however most 2 meter action occurs on simplex, just like CB. Many
times, it sounds like CB. I find most of the extra cl ass hams are
the ones with the attitudes. The rest are OK.

Don't give up your CB. Just add more radios!

I've been thinking about 2 meters, but I just don't see me leaving 11 meters. I can go freebanding on SSB and still listen to the locals chew the fat or fight when they're drunk. Channel 19 offers up some crude entertainment from time to time. I also use the scanner and get the scoop on what kind of trouble the locals are getting into.

I think any inbred hick with a CB radio in his truck is too stupid to ever pass an amateur radio license examination. In fact, I'd even question how he obtained a driver's license -- if he has one.

Is anyone in need of the txco for a ft1000?

I have a good one removed to upgrade the 1000 to a "D"(funny, it was sold to me as a "D").

In any case, it MAY fit other rigs.

$25 shipped USPS M/O in CONUS.

Thanks,
MArk
k8vf

Since you are in Australia and you probably do not have a Yaesu repair
facility close by I would stay away from their crap radios.
Their VHF/UHF mobiles are known for poor performance, poor reliability and
just crappy built quality.
I have owned radios from all the major manufactures and Kenwood, along with
Icom are some of the best for the dollar.

A "Bullet-Proof" mobile for the money ($269 US) is the Kenwood TM-G707A.
Good performance all around.

I have a Yaesu equivalent FNB-27 battery and I lost the charger. I picked up a replacement from Radio Shack last night, but I don't know if tip should be positive or negative, and couldn't easily take the battery apart. It's stone-cold dead, so I can't just hook up a meter to it. Any info would be appreciated.

Also, the charger that I got is a 500mAh charger, I just noticed that this is a Ni-MH battery. I'm not going to have any issues, am I?

I personally have never had a problem with *any* Yaesu radio that I
currently own, or have owned in the past. I like their VHF, and dual band
radios. I do however prefer Kenwood for HF.

My faithful Drake TR7 (SN 3119/ purchased new in April of 1979) has developed a power output problem. The TR7 generates normal power output at turn on, but after a few minutes of transmission the ALC becomes active and starts cutting back the power, with the output shutting down to a fraction (1/10th) of normal power. It appears to continue to work (CW, SSB, and psk), but the reflected power jumps up (suggesting out-of-band energy). The antenna is not the problem. I have checked the transmit relay, cable and board connections, and switch contacts. All appear to be OK and not contributing to the output problem. Running reduced power (25 watts) slows down the ALC coming on a little, but not for long. The TR7 receiving is stable and normal for all modes and all bands. The problem is not band related either.

Has anyone seen this problem or have an idea what is going on?

Any suggestions on the best place to get it repaired?

Andy, K4YKZ

Andy - Many of the DRAKE TR-7 problems can be traced to its type of motherboard construction with daughter cards plugging into it. The large number of connectors get flaky with time and cause all sorts of problems. Can't say yours is this, but suggest getting a can of DEOXIT [http://www.craig.com] or some such contact cleaner and go over every contact you can find. Be careful in getting the cards replaced correctly and without messing up a coax or wire, etc. Also don't forget all the decks of the band switch.

BTW - I sell a set of 13 Extender boards and the Digital Jumper board that were sold as a Service kit by Drake years ago. If interested contact me directly.

Good luck with a great radio.

73 Bob W7AVK

I've had no problems with MOST of my Yaesu stuff, having sold it on quite
soon after getting.

However I did buy a NEW Yaesu scanner about 5 years ago.

Back to dealer screwed up. NEW replacement supplied.
That went back to dealer screwed up. NEW replacement supplied.
This one sometimes throws a wobbly and needs a reset but at least it does
work (at the moment)

Never had a problem with Icom and their support here in UK is superb- email
questions answered, copies of manuals supplied FREE for second hand
equipment (when its not on their site). Can't fault 'em.

OK then, Since we all want to be proficient, how about this:

Step 1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

not the worst idea but unlikely to be put in place

>
> Step 2: The passing score for written exams needs to be raised to 85%.

why? again not the worst idea but why bother

>
> Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

and why is it that you hate the ARS?

>
> Step 4: Make the no-code license one year non-renewable.

since this wold kill the ars within a single renwal cycle

your proposal would kill off the ARS n 10 years or less

why do you hate the ARS SC

>OK then, Since we all want to be proficient, how about this:

<<snip>> exactly the same proposals SC has made before, concerning which
he's stated that "99%" of the people on USENET "hate", and which
contain positions even more radical than those which have already been
rejected by the FCC.

Trolling again, SC?  Pity.  If you were actually willing to engage in
a productive discussion you might actually do some good, but I don't
see any evidence of that.

PLONK.

The tip of the charger plug should be positive.

As for whether your charger will work with NiCd or NiMh batteries, the
answer is maybe.
A quick google found me this page with some info.

http://www.greenbatteries.com/bachfa.html#charger%20differences

I have a friend who has a Yaesu FT-8800R transceiver That transmits a "beep" each time he transmits. We could probably figure out how to turn it off if we knew what the function is called...

A full reset will clear the condition but it also clears all the other programming. Once again, if we knew what the "feature" was called we could probably figure out how it gets turned on unintentionally.

Thanks, but Menu 5 is an audible beep when a key board key is pressed.
The tone that happens with this problem is heard at the transmitter
and the receiver.

<snip>

I had the same thing. I can't remember what the function was called but it
took me a few hours to find out what it was trough experimentation.

Press the right hand volume control down briefly disables it.

I really hate the controls for this radio.  They add stupid functions like
this to the front panel but leave important things like memory skip deep
in the menus.

Being they are Copper mods means lots of clipped diodes and removed
transistors. I wouldn't take those tapes for free.

Hi Sal...

> I have problems with most characters of four or more elements length.
> Exceptions are <period> and <Q>, for some reason.

Since I don't do CW too much anymore, I have similar problems, and I've been at it since 1961!
If I did it more, I'd probably get better and I'm not suggesting that you "need more practice", just offering a little empthy... (:-)

[... snip ...] Oh yeah -- I know <V> because the dit-dit-dit-dah sounds
> like the 1812 overture.

Ummm... I believe you are referring to ''Beethoven's fifth" di - di - di - dah. di - di - di - dah. dididididah, dididididah, dididididah...

73, Steve, K9DCI

Granting a person privileges because they're retarded is like being forced
to hire someone because they're black.

Hm-m-m.  I can hear that in my head.  ... thought it was the 1812 Overture.

BT

Playing the selection is mighty convincing:  Ol' Ludwig pops off some V's
right at the start.  I do not seem to have the 1812 Overture handy, so here
I tread ever-so-lightly ... not being much for knowing good music.  I can
run bits of 1812 through my head, too, but not much.  (I just get started
and run out of headroom.) I shall seek it out.  TKS & 73

Sal

MORE: I just played the 1812 Overture and didn't hear any V's. Heard quite a few T's and E's ... but no V's.

Thanks.

it is a 12(?) minute piece, and i ran a few minutes through my head.  there
```

is a short part that goes dit dit dit dah.

if you get the real cannon / bass drum recording, it is incredible.

Gravity

I've been looking for a flat black colored person but have
been unable to find any. I also have not found anyone who
is white as a sheet of white paper. Alas, all I have found
are people who vary in shades of brown earthtones. By looking
at a spectrometer display, it is actually hard to tell one
from another.

no need to pay for these trash mods...

I've got his set of tapes, used a postal mo to pay for them
(it is no good)

will be posting the mods to my mod site for
downloading to burn your own dvd.

oscar

Phony's can ignore. This question doesn't apply to no-codes.

Nickle Generals and Extras:

If the 13 and 20 wpm CW exams came back and you had to pass the proper
code exam for your class to renew, 13 wpm for general, 20 wpm for extra,
would you renew your license?

Yes to the Extra part. I have been trying to get to 20 wpm all my life and I continue now. It has never made anymore sense to me than a requirement to be able to run a five minute mile. 16 wpm seems to be the fastest code I can differentiate with my ear/brain connection.

If the code guys need a special chunk of the band to operate high speed code they can petition for it. My hat is off to those who have both the code skills and the technical skills to be superior to me on any subject.

However, I am embarrassed as a long time Ham by those who would deny the hobby to anyone without Code skills.

I believe the ARRL offers Award Certificates to those who can achieve the higher speeds.

Thanks for the opportunity to speak out. Another characteristic that earns no respect from me is the matter of remaining anonymous on the Internet. I expect that your CB handle is something like "Bad boy" or "Rain Brain". If you were not a troll by choice you might be able to make a positive contribution some where.

> Wanted: Motorola Spectra Accessory Connectors (9 Pin)

Uhhh... pardon? That doesn't sound quite right.

The accessory connector on the low-power dash/trunk-mount radios is a D-sub 15.

The accessory connector on the high-power trunkmount radios is a D-sub 25.

The only place I've ever seen anything resembling a 9-pin connector is on the motorcycle Spectras which use the thing as a microphone connection.

Are you sure you're looking at the right connector?

Happy tweaking.

Yup. It'd take a bit of practice to get to 20 wpm again,
but its worth the effort IMO.

What? I ask a friendly question as to who would re-new their license if Code speeds were increased to what they should be and I get called a troll. Well eat shit and die. I got a real Extra class license. You nickle hams are really unfriendly assholes sometimes.

Well, Slow Code, I'll give you a straight (and I hope friendly) answer
to your question. I'll then give you a straight (and I hope not-unfriendly) explanation as to why I believe people are calling you a
troll.

The first answer: well, I think I'd certainly *try* to renew my
license. My CW is distinctly rusty - I use it only rarely, and I'm
not sure I've ever managed to copy 13 WPM (let alone 20) well enough

to pass the one-minute-error-free barrier, or be able to answer the necessary number of questions. So, it'd take a bunch of listening and practice to reach that level.

I'm not sure I have enough time free to do it. I've got a busy life, work full-time plus a bit, and much of my ham-radio playing time goes into other areas of the service (I'm an ARES/RACES AEC for my city, a mutual-aid comms responder for the county, and I've put in a huge boatload of hours over the past couple of years helping redesign and rebuild and debug the local hospital's repeater system). Getting really serious about doing high-speed CW would consume a lot of time, which would necessarily subtract from my ability to (e.g.) spend many hours of circuit analysis and modelling and experimentation to figure out why the fancy commercial repeaters we bought had such lousy-sounding audio (turns out the designer had mis-used the discriminator IC, forcing it to "clip" the signal internally, *and* had messed up the design of the de-emphasis network.)

And, I have no assurance that I'd ever reach that level. As several other people have commented, it's perfectly possible for people to work, hard and honestly, at copying CW for years, and never be able to reach the 13 WPM level. I strongly suspect that to some extent, CW-copying is tied to certain sorts of neurological organization in the ear/brain system - some people may be born with more potential ability to handle high-speed CW than others. Effort or no, some people seem unable to learn to copy CW at all, others can do so but never become very good at it, and *many* people report hitting the "13 WPM wall" and never being able to copy reliably at rates much faster than that.

Now, in your previous epistles on the subject, you and your nym-clone were advocating not only requiring testing for 13 WPM (General) and 20 WPM (Extra), but also making the no-code license a one-year nonrenewable. If that proposal were accepted, there's a strong possibility that I'd end up being kicked off of the air the next time my license came due... either because I was unable to push up to 13 WPM no matter how hard I tried, or because I'd devoted my time to other aspects of ham radio and hadn't taken time to study-up.

So - that's my answer. I might end up being able to renew my license (although probably not at the 20 WPM level), I might fail the CW test, or I might just decide that the "old boy's club" had made it clear that they didn't want anybody other than rabid CW operators on the air, and decide to go do something else productive with my time.

Now - that being said - let's address why you were being called a troll. I think it's because it's quite clear to people reading these threads that you have a serious agenda, sir. You've made several attempts (apparently under several posting IDs - some refer to these as "sock puppets") to drum up support for your CW Uber Alles rules change proposal. You've scoffed at, or simply ignored, the many people who have pointed out that your proposed changes are 180 degrees out of phase with the international trends (i.e. the WARC rules), and with the FCC's publicly-stated feelings on the matter, and that your proposals are essentially equivalent to ones which have already been ruled out by the Powers That Be.

In short, the "what if?" question you asked is entirely hypothetical. There's just no chance at all that the FCC would enact the sort of CW-centric licensing rules you have proposed. Ain't gonna happen. Your asking questions about "well, if it _did_, what would you do" is probably part of why you're being called a troll.

Numerous people have responded to you, expressing their opinions that your rules would decimate the ranks of amateur radio by forcing off of the air a large percentage of today's licensed operators. Your "friendly question" seems to be intended to try to address that question, but you phrased your inquiry in somewhat-loaded terms, and in a way which almost guarantees that you won't receive an accurate and unbiased set of answers which actually represent the feelings and opinions of this newsgroup's readers.

To sum it up, your way of presenting your agenda probably leads people to believe that you aren't serious about debating or discussing the issue... and that's probably another part of why you're being called a troll.

I agree with you that the Amateur Radio Service (and hobby) benefits greatly from being hams to like to study, learn, advance their skills, and use what they know. That's one of the specific purposes of amateur radio here in the U.S., and I think it's great.

I *disagree* with you that the ability to learn to copy CW at 13 - 20 WPM is, or should be, the "litmus test" which decides whether a person is Worthy of being a ham.

Your fixation on CW is, I think, actively interfering with your ability to support ham radio by promoting *all* aspects of technical and operational learning. I believe that your attitude hurts ham radio more than it helps.

That's my $0.05 worth, adjusted for inflation. Take it for what it's worth for you.

[and, I'm sorry to say, based on your past postings I don't really expect you to address the meat of what I've said. I expect that you'll toss off a one- or two-liner, dismiss what I've written, and keep on as you have been. I'd be pleasantly surprised to be wrong about this!]

The hobby is almost dead anyway,nothing is going to save it. No one
cares about Ham radio.Most people under 30 have never heard of it and
don't care. All they want is their cell phones, Ipods,etc. The FCC
can't save it by changing anything.

hi ham radiogroups, im after the internal power  control or alc inside of a
icom725 hf transceiver the radio is doing way to much power for the power
supply, it currently is doing 150 watts it needs to be turned back down to
around 100 watts .thanks in advance david from nsw australia .

Howard,

I have a pdf of the full service manual -- but it's around 19 MBytes
which is a bit big to post to this newsgroup. Want me to e-mail it to
you or shove it onto a web server somewhere?

=================================
If the current RF power output itself is not a problem ,but the max current which can be supplied by the power supply unit (presumably 13.8V) I would suggest to put a sealed (car) battery in parallel.

The quoted 150W RF power is highly likely PEP ,so when operating SSB the average current consumption is possibly half the peak current or less even with some speech compression .
The battery will happily supply some of the current during peak demand.

Since the battery is permanently 'on the charger ' being in parallel with the power supply unit , you don't need a deep cycle battery ; a cheap and cheerful 40 -60Ah sealed car battery will do the job well.
It is essential to put a 25-30 A fuse in series with the battery .

Note : I recommend anybody to use a (sealed) battery and a low power PSU to feed a transceiver requiring (13.5 -13.8 V-DC) external power.
During rx periods the PSU output could be (automatically) disconnected .
Receiving on battery power alone is often beneficial eg less noise and

mains borne interference. Although the low impedance of the battery
will cause it to 'kill' most external mains borne interference already.

A local ham uses a FT857 with a 110Ah sealed battery, without a mains
fed PSU . When not operating the battery is connected to an automatic
car battery charger ,which is only disconnected during operation.

I am traveling to the Outer Banks,NC this summer with the family and would love to bring along my qrp rig. The 'rig' of course consists of radio, battery (closed, gel), antenna, key... I am looking forward to the point when this conglomeration of 'unusual'-appearing electronic gear etc goes scooting thru the xray at the airport. Pre 9/11, I took this gear everywhere (internationally) without ANY difficulty whatsoever. Just not sure that will be the case now however. So my question to the group is: who's traveling with their gear and what's the best approach (save for shipping it ahead - looking into that possibility already). Thanks.

gary

On the contrary, when I got my ham license in 1952, that
was the major reason given for the code requirement.

That's exactly what he did but it didn't make up for the
previous 30 years of being barred from the HF phone bands.

Pure sale, no bidding wars.

Summer cleaning out the shack: several items
(terms at end)

1. (dead on transmit) RF Concepts, RFC 2-317 (2 meter brick amplifier), 30 watts drive, 170 watts output. The transmit side of the amp is dead (looked like power transistors gave out over a few minutes of transmit way back and I never tried to locate someone to fix it; the receive GasFET preamp still works). The manual goes with the brick amp. The schematic says the power transistors (assuming that is the problem) are SRF3897 and there are two of them. Schematic looks like two in parallel (many other transistors, too). RF Concepts went out of business some years ago but maybe one of you guys who knows this stuff would like to have a crack at this repair job. $10 for this unit.

2. Two Hamtronics receiving converters, CA-28 and CA-144. One takes input at 144 - 148 and converts down to 28-32 mHz (and I put a 9 volt battery case inside, and small toggle switch), the other one takes 28-30 mHz and upconverts to 144-148 mHz (I was meaning to listen to 10 meters FM repeaters with my 2 m HT but never tried it). These units do not have as low of a noise figure as the best scanners and newer ham transceivers. Both units to the same address, $35 for both. Otherwise $20 each. With manuals and documentation.

3. Yaesu YS-500 in line wattmeter and SWR bridge for 140-525 mHz. Looks fine, works fine. Max power: 200 w. With one sheet "manual" $30.

4. 440 FM Yagi, 10 elements. I think it might be a Hygain but can't remember for sure. No manual or documentation. It was never outside of an attic. At old OTH it was aimed at one 440 repeater (at present QTH, I have way too many trees and barely can get into one 440 repeater that almost no one uses, so it goes 'on the block'). $25.

---non ham electronics------

5. OPTIMUS (Radio shack) AM/FM STA-795 solid state receiver, with manual and documentation. Works fine. $20.00

6. Night vision device: NV-100/NV-100-1 by Moonlight Products, bought through Edmund Scientifi when it was in business. I need to test it at night before releasing it. I think its a first generation device. Has a large telephoto lens with low f/stop, includes manual and documentation. Runs on two AA batteries, and has its own IR diode light souce if one wants to try that. Has not been used for maybe 7-8 years, but worked fine at the time, and was always stored in a stable non-moist room at RT. Was not used much when it was used (maybe 1-2 hours, total). I seem to recall reading that these units undergo some deterioration in performance with time, but I don't know if that is independent of whether the units are used or not used. $40

7. Panasonic AG-1830, Video Cassette Recorder, Pro-Line, commercial grade. With manual. Used a lot back 10 years ago, not much since then. It has an on-board frame-grabber, but I have lost the remote control which is how the frame-grabber was activated. Complex controls and relatively thick manual. 17 lbs. Some dust here and there. I have not extensively tested all functionalities, but besides the missing remote control, it was recording and playing back last time I used it. But if you want to receive TV signals and record them, you may need a preamp because the input is normally not very sensitive. I was in a fringe area and got noisy images unless I used a TV receiver preamp. New price over $1000. My price $55

8. Hitachi VHS video camera (portable), VM-2500A, with dead lead-acid gel-cell battery (will not hold charge, won't accept charge). Camera (color) still works fine and records audio, too. It runs fine with an external DC power supply of about 9.6 volts 2.3 amps. This is an old style, over the shoulder unit. With manual and documentation, and some cables (can take output from camera, in playback mode, and feed into a video imput device). I think its never had more than about 20-25 hours of running time. My price $30.

Terms:

If you are interested, send email. I prefer to sell in the continental USA. I prefer to ship USPS, but UPS may be less risky in terms of damage. I prefer USPS money order for sum. Sum needs to include shipping charges which I will estimate, and I'll refund any excess if there is excess. If you want insurance, I'll include that in price. No charge for packaging, handling, which will depend on what item we're talking about and I'll do my best to locate packing materials, especially on biger & heavier items. If we go with USPS, I will spring for delivery confirmation and email you the DC number. You'll need to send the money order first.

I am located in southern Delaware. Please wait a few days before expecting a response. In the event more than one person wants the same item, I will work with the first one and tell the others that they are "backup" buyers in case the first one backs out or something. You need to specify how fast you want the shipping to be; UPS and USPS have several grades of service speed (faster is more expensive). If you have a counter-proposal, I'll

consider it. Please give you "ship to" address in your first email to me.
On the non-ham gear, I will probably "check" the unit to make sure it is
at least minimally functional before shipping.

Art, W4PON

"hungry" and "homeless" people are there by their own choice or by choices they have made in their past. The welfare system doesn't work, otherwise there wouldn't be 5 1/2 MILLION people dependant on it.

Yes....... I have a problem with the system when 28% of my *net* profits get paid to the feds to support lazy dead beats, and another 4% goes to the state for the same.

I am retired Military, I served my country for 22 years, My father was born in this country by the grace of god, and couldn't speek the language until he was in grade school. When I retired from the miltary, I started my company and have worked my ass off for 10 years to get to where I am now, finally starting to make a comfortable living.

There are too many jobs out there for folks to be unemployed, homeless, or hungry. Those that are unemployable are those who by their own choice, can't seem to show up to work, let alone on time...those who can't seem to show up for work sober and not hung over, and those who can't seem to be able to pass a drug screening. If I could find somebody that *COULD* meet those minimum standards and had a little common sense and a desire to learn, I would hire them in a heartbeat, and they will earn good money.

They have made their choices.... I for one am damned tired of having to foot the bill for their irresponsibility, lazyness, and feigned ignorance(you can't be ignorant and be able to sponge off the system)

(Reagan's Welfare Queen was a myth, you know.)

When a company moves offshore they do not reduce prices to the end
users. They increase their profits.   Most big companies don't even
pay income taxes because they are legally running out of a drawer in
some Carribean island.

 Eventually the middle class will be gone due to outsourcing. That
will be the end of the USA.

i hate to play devil's advocate, but i can read CW with spectral analysis
software. several of us on the very low bands are doing that.

yes, the chances of some deaf guy "hearing" an SOS is pretty slim.

it's sad that people get alienated from hobbies.  it's also a fact of life.
i downloaded some composition software, and it turned out i SUCK at making
digital music.

i can play the second movement of Moonlight Sonata, but that's about it.

i remember this girl in chemistry class.  she studied 5 hours for a test.  i
studied 10 minutes.  my score was 30 points higher than hers.  i wasn't
necessarily smarter than her, i just knew how to study, and same thing with
CW.

i learned Morse Code at age 15. i got up to 25 WPM, perfect copy. i made
QSOs, did a few contests, and quit for 9 years.

i now copy at 18 WPM, which makes me think i learned it like it was a
language.

some suggestions. use Farnsworth, copying characters at 18 WPM is less
annoying.

make QSOs! would you learn a language by using audio CDs, or would you talk
to native speakers?

find out what the format of the test QSO is!

i didn't study much for my novice code test. i had no decent tapes, and i
had to borrow my dad's computer to use software. computers back then were
$2000 and no kid had one.

so anyway, i use Supermorse as recommended by my club. i get to the test,
realize my code sucks, and luck out because they do a Supermorse QSO.

it's easy in today's world: free practice MP3s and $50 computers.

if you are contesting or DXing, CW rules.

HF phone contests will drive you insane, esp if you want to win an award.
even 10 meter phone was wall to wall stations from 28.300 to 29.000. i had
phased Yagis, and had to go way high, or end up stomping on someone.

if you want to run DX, good luck with 100 watts on SSB.

That may be what someone told you, but it was not the reason. The reason was that it was part of an overall "radio education" and it was one of the fundamentals of radio even in the 1950s.

Back when I was young and interested I lost my desire to learn code when I
started monitoring the ham bands. It all seemed too formal, and then like it
is now, you have a large segment that think you are trash if you don't have
the highest obtainable license. Even this thread proves it. You have a large
contingent hell bent on having CW testing with any class, even though I
never plan to use CW. I could get my Tech ticket, but then all I'm going to
hear is that I'm a no-code tech. I rather be a CBer as we have no cast
system.

Then I guess all those Fotrune 500 people have it wrong as they are in
buisness for making money. Even my boss hired me to make money, not to keep
me busy. Hell I can keep myself busy.

Gated communities? I live in the sticks armed to the teeth. They can eat the
dead bodies I leave in the yard.

You're a tough guy.

During a more civilised time a company went into business to provide
jobs and make profits and to be part of a community.  Nowadays
corporations are extranational, have no local ties and just milk
markets dry and move on.

Corporations pay way less than half th cost of running governments,
even though they are the major beneficieries of what governments
provide.  This is because we let them write their own rules.

First not every homeless and hungry person is there by their own
choice. There are those that the system chrushes and grinds into
pieces just for beign at the wrong place at the wrong time. The
welfare system does work. Yes decision and actions in all our past
make differences. Yes some want to live the way they do. Somewhat out
on the fringe of society.

What you pay is part of doing business. I bet you pass most if not all
off when and where ever you can.

Corporations do pay taxes. The expense of taxes is often passed on where feasable. Often these are in higher selling prices. Often taxes do intrude on profits. When they do, there are steps taken to regain that profit. Outsourcing is a means of regaining profit. Cutting benefits and maintaining salaries is another. There are other means also.

That is very correct. Workers are but now a resource and not an asset.

(see original post farther down)

Update (as of 7:40 pm): I have a pending deal for the night vision scope and the RFC brick amplifier. If the deal with those interested parties falls through, I will make an re-announcement.

I forgot one more item: a single pan, digital balance (transistorized), Its an "Ohaus" model C305, and reads in grams or ounces. It has a calibration weight (300 g), a wall plug transformer supply, and can run off an internal 9 volt standard transistor battery. And, yes, the manual comes with it. It also has a button for "tare" weight (eg. put an empty container on, press "tare" and it re-zeros the digital readout. The pan comes off the unit for shipping, and just drops on. I was using it to weigh letters and small packages. Now I have some new scales for that. My price: $20.

Art, W4PON

The transmit side of the amp is dead (looked like power transistors gave out over a few minutes of transmit way back and I never tried to locate someone to fix it; the receive GasFET preamp still works). The manual goes with the brick amp. The schematic says the power transistors (assuming that is the problem) are SRF3897 and there are two of them. Schematic looks like two in parallel (many other transistors, too). RF Concepts went out of business some years ago but maybe one of you guys who knows this stuff would like to have a crack at this repair job. $10 for this unit.

You are right! Corporations don't pay the cost of running governments.
They pay the cost of usurping governments!

I have problems with most characters of four or more elements length. Exceptions are <period> and <Q>, for some reason. As I have said here, after hearing dit-dah-dah-dit identified, whatever it is, I cannot subsequently hear it and know what it is. I think my own first name initial, <J> is some combination of three-and-one or one-and-three, but I can't remember it. Oh yeah -- I know <V> because the dit-dit-dit-dah sounds like the 1812 overture.

I dial a telephone with two fingers -- one pushing the buttons and one holding my place in the phone book, since I have to go back and look at the number repeatedly. Yes, I do memorize phone numbers, but I may invert the digits when I try to dial them. This is a royal pain in the ass.

When I joined the Navy in 1962, one of our tests was for clerical skill, which involved inspecting columns of numbers and calling the entries on each

line either ALIKE or DIFFERENT. I scored a 35, lower than anybody I ever
met. I wanted to be a Yeoman (clerical duties). Instead, they sent me to
ET school and I've never looked back.

I'll read any responses, but I think I'm pretty well talked out on this one.

character transposition. some people are bad at it.

i suspect there is a genetic predisposition.

Desperately looking for TS930S Kenwood Part No. S90-0401-05 Remote
switch shaft, MODE. This is a mechanical assembly including the MODE
switch shaft mechanism which transfers the MODE knob movement to the
actual electrical MODE switch on the other side of the front panel.
Thanks, Steve, va3ars

I'm picking up my new Prius this week and am curious about running radios in the car. The techs at the dealer stare at me blankly when I bring it up. I plan to operate an Icom IC-706 on HF and 2m. My assumption is that the radio would run off the small 12v battery used for accessories and engine starting. Since it's impossible to idle the motor while standing still, the battry would seemingly run down pretty quickly.

Any suggestion or comments?

Hi Jim!

I've had my 2005 Prius for almost a year and have used it on VHF and UHF at 50 watts and works well. I haven't tried HF but have listened with my 817 while in the car and I didn't hear any computer noise to speak of.

Yes, that little battery in the back is a small one, but the computer(s) monitor that and will run the engine if it is in need of charging, even if you are sitting still. Same goes for the AC or any of the other things that drag it down.

Having the battery in the back is kinda' sweet. Not a lot of extra
heat to kill it sooner than later (I'm in Arizona) and I put the body
of the yaesu 8800 in the storage area near the spare. Ran the antenna
up behind the seals and onto the roof and simply use a mag mount. Not
easy with an HF antenna of course, but I'm sure there would be a way.

It was a snap hiding the wires and making a first class looking install
with it. No noise at those freqs.

Hope that helps. Have fun. That is a very cool car.

I am aware of the car but have no practical experience, so here goes with a few suggestions.

Could the small battery be 'swapped out' for a larger capacity one?
(Physical size/ charge available from alternator are the things to look at)

Is it possible to take a 12V 'tap' from the large batteries that power the electric motors?

If none of the above the only option I can think of is a split charge circuit and another (yes I know there's enough batteries in it already) battery in the luggage space. (don't forget to make sure it's vented)

Hope this helps
73's & good luck! Brian

I don't know about the Prius in particular, but several years ago I owned a pure electric car. At that time the up-and-coming technology was a DC-to-DC converter that would maintain charge on a 12 volt battery by getting power from the traction batteries, which were commonly 50 to 100 volts. Without the converter the 12 volt accessory battery would be drained by lights and radios until the car was plugged in for a recharge. The biggest problem was trying to keep the headlights bright.

I've no idea how easy it would be to make a connection to the Prius traction batteries. Probably not recommended by the service department. But if you find a simple way to do it, you might be able to keep the 12 volt battery charged.

There is a group called CalCars (http://calcars.org/) which advocates modifications to hybrids to let them run more on electric power. They might have more information.

Doesn't the Prius start the gas engine if the battery is getting low?

It would seem that any battery that is used for starting a
substantial engine should not "run down pretty quickly"
from the load of a tpical radio.

Thank Impeached Clintoon.  Besides, what do you care, Dr. DaviD?  Your
welfare checks will still arrive, no?

How would you describe your welfare stipend?
Will you move on when it runs dry?

> Corporations pay way less than half th cost of running governments,

I was unaware of your offers of alternative measures as it wasn't in this
thread. I agree, if he has alternatives at his disposal, it's on him to take
advantage of them.

My point exactly. Recruiting foreign eng talent is driven primarily
by economic reasons. The oft repeated lament by corporate flacks and
politicians that we lack sufficient talent at home is a damn lie.

With deaf people use can use a light or a subwoofer for them to copy code. I
don't want to stereotype deaf people, but I have found many of them to be
hooked on entitlements and expect unreasonable accommodations. I have a
relative that refuses to wear a hearing aid, and then gets angry when there
are communication problems. This person is physically able to work; yet sits
around on my tax dollars playing the feel sorry for me card.

Deaf persons have succussfully completed the code portion of the testing
at all levels of speed. Some use a vibrator attached to their wrist.
Others us a light. As mentioned elsewhere "never say never".

Dave WD9BDZ

Well then, why not just declare deafness to be a
capital crime in order to solve your personal
problem with deaf people?

I do not have a personal problem with deaf people. If you would leave my
post intact maybe you and others would comprehend that. You just want to
turn what was an on topic post into a flame war. You are not worth the time
and effort. <plonk>

But that certainly doesn't satisfy the letter of the regulations.
To do that, they must "copy by ear".

Wonder why no-code ass hats like lee scott, eric oyen, doug adair, and mark morgan can't get it done? (they're not deaf, just brain dead hud dwelling sissy's)

CW is for old people anyway aint it? :)

If I don my knee braces, I still can. Can you?

The point is that some things are possible for each
individual and other things are impossible. Anybody
who can't dunk a basketball or pass a MENSA exam should
know how a person feels when they can't learn Morse code.
I personally think it would improve the ARS to only allow

MENSA engineers to be a member. How does that make you feel?

One of the brightest engineers I know, who has a commercial
FCC license and was the engineer at an AM broadcast station,
couldn't get past 5wpm so he was condemned to Tech class for
30 years. He knows more about radio than any ten other hams.

Not a correct analogy. For starters, completely deaf people have learned the Morse code. Flashing lights and pulse pads have served their needs. Just as they have learned to speak and read lips, they can learn alternative methods of using code.

The 5wpm level is more equivalent to dunking a basketball in a basket that is just above head height rather than regulation professional height. Under those conditions, anyone can dunk a basketball.

The biggest reasons people "cannot" learn code are very simple.

1. They don't really want to and so subconsciously resist.
2. They have been subjected to poor training methods.
3. No one's ever taught them correct practice methods.
4. They have developed unrealistic expectations of the level of effort required.
5. Due to bad experiences resulting from the above items, they've convinced themselves they can't learn and so create a self-fulfilling prophecy.

Every problem that Sal has described has afflicted almost every student of Morse code (except perhaps for the very rare code geniuses). Forgetting letters right after learning them? Been there, done that. Confusing letters? Been there, done that. I've had to bow out of QSOs because my brain freezes up and refuses to keep copying.

It took me 3 months of daily practice of an hour or more every day to get to 5wpm. That's over 90 hours. The average person only needs about 30 hours. I experienced every problem that "Sal" has mentioned. I eventually went on to master the 20wpm. That took 9 months of the same intensive daily practice, over 270 hours. Fortunately I wasn't hobbled by the expectation of learning it in a few weeks. Luckily no one had ever told me I could learn it in a few days or weeks. So I just kept at it for however long it took.

True enough but that accommodation has been accepted for a very long time.
The regulations also said that they must be by hand. A sending test hasn't
been used in decades except as an accommodation for people with hearing
problems, etc. The FCC itself had stopped administering a sending test
before they turned the testing over to the amateur community.

But the letter of the law says they must receive Morse code
by ear. Anything else is a violation of that law. It's
like qualifying to be a life guard by doing a broad jump.

I do not believe the couldn't. I've listed the failure reasons in another post.

Well the accommodation has been used and accepted for a very long time. The regs also say send by hand but no one has administered a sending test in decades except as an accommodation to individuals with difficulty in receiving.

Your life guard analogy doesn't hold up either. Instead it would be like allowing the life guard to use a row boat instead of swimming out to the victim.

You have just admitted that the Morse code test has been
irreversibly compromised already. A deaf person holding an
HF ham license cannot hear an SOS so the entire purpose of
forcing him to learn Morse code is bogus. He is going to
be using a digital mode, not sitting there with his hand
on the speaker waiting to feel an SOS from a sinking ship
that doesn't even have CW capability anymore.

Believe me, this guy shed tears when he couldn't get past
10 wpm. He has a physical mental tick every few seconds, akin
to epilepsy, that causes him to lose time. He cannot speak
one minute of continuous speech much less receive one minute
of continuous Morse code. When he speaks, some of the time
is silence while his brain is out to lunch. But when he
does speak it is worth ten times the average person's
utterances. He is an engineering genius.

That's what they are replacing the CW test with, the slam dunk. Now all
those hams with their Hover Rounds will have to give up their tickets.

Hello Robert,
I know it was long time ago when you posted this message but maybe you can help me. I am desperately looking for one single mechanical part from the back of TS930S front panel. This is: Kenwood Part No. S90-0401-05 Remote switch shaft, MODE. This is actually a small mechanical assembly which transfers the movement of the MODE knob to the actual switch which is on the other side of the front panel. This part is obsolete and is not possible to repair. Please let me know if you or somebody has a scrap TS930 and could have this part. My radio, otherwise in perfect condition is dead just because this small mechanical part. Thank you.
Steve, va3ars

I think most of the RRCB regulars have pretty much ignored him as of late.
It's his pathetic RRAP buddies that followed him here that keep him fueled

You are quite correct. Unfortunately some owners seem to never have
enough money.

No, it does  satisfy the alternative methods of copying code as
specified by the  FCC.

Yea, I stated a thread about that titled ham operators...why must they ruin
RRCB?

Eric Oyen was the only ht ham to tell me how wrong I was. Oh well.

 (sock puppet hams generally post gay shit below here.

I don't think you insulted me -- it was whoever said I don't deserve a license.

However, I do think it's a bit of a stretch to say that I can learn code just because I can speak and understand words. You should see what my raw typing looks like before I go back and fix it prior to hitting send (or should I say "sned," which was what I typed the first time -- typically four or five of those per line.) It's pretty bad.

I'm thinking of trying to learn the dits and dahs as strings of written dots and dashes on paper. According to everything I've been told or exposed to, that is not recommended. All the training says the goal is to perceive each letter as a consolidated unit of sounds without any intermediate translation steps. Well, since I'm positive that isn't working, particularly for characters of four or more elements ... maybe a graphical alternative is in order.

You have extracted something from my post that was never there. No one has ever said that the purpose of hams knowing code was to hear a ship sending an SOS.

In addition, he might have a light rigged for cw, which he could see as he moved about the room.

Digital modes fail on a regular basis due to static, auroras, etc. It's a good idea to have a non-voice, non-computer alternative.

Since the late 80's, he could have gotten a medical waiver for the speeds higher than 5wpm. His case proves my point though. i.e. He did learn the spoken language despite his problem. He did learn the 5wpm despite his problem. His problem manifests itself in dealing fluently with the spoken language and also manifests itself in dealing with higher code speeds.

A problem that would affect the ability to learn code affects the ability to deal with the aural/spoken language.

The highest level of interest for learning the code is among the young.

> What's the gist of it, Dee?

1. Incorrect training methods. These abound. There are more bad ones than good ones around.
2. Incorrect practice methods. Many teachers and students don't really know how it should be practiced. They just muddle along. Among other things, that means daily practice not just getting together with a teacher once a week. It also means breaking the daily practice session into 15 minute increments so the brain doesn't fatigue.
3. Unrealistic expectations is quite possibly the biggest one. People think they should be able to learn it in a few days or a couple of weeks. It takes the average person 30 hours to get to 5wpm. At an hour per day, that's one month. A more comfortable pace is 1/2 hour per day for two months. (It took me closer to 90 hours.)
4. Disapppointment created by the above issues causing a person to believe they can't do it thus creating a self-fulfilling prophecy.
5. Not wanting to do it so they end up fighting themselves subconsciously.
6. Negative reinforcement by those who tell them that code testing should be eliminated because it is "useless". Anyone who's seen HF trashed by static or aurora should know better.

It was part of a rebuttal to someone who said that requiring 5wpm code was as reasonable as having to be able to dunk a basketball.

Typing and reading are visually based. So it makes sense that those are a
problem. But do you have difficulty saying words or hearing them? Just
because the typing is a problem, doesn't mean that the aural/spoken is a
problem. Reading/writing is a different activity than hearing/speaking and
uses different parts of the brain. While I can't imagine a graphical method
working for a dyslexic since it's visual, who can say for sure.

By the way, I still have problems with longer characters now and then or combinations of certain characters. I had an awful time trying to copy a call sign in a contest that began with SH5 (3 dots, 4 dots, 5 dots).

Recently I can across a "music" track that is about 5 minutes long that
teaches Morse by the sound of the characters.

If you would find this helpful I may be able to get a copy of it and
place it on an ftp server for you.

Regards

David

Hi all,
```

Anyone that can assist with an electronic copy of the manual for KLM's 4 element monobander for 20m?

73's
Hans - SM�IMJ

```

Outsourcing started way back in the 70's. It has only been in the last decade that anyone in the media and public paid any attention to it. When layoffs became common place after the dotcom bust then the public finally realized that the barn door was open and nearly half the cows are gone. A bit to late.

james

Any such animal? I only need 2M, but any extra bands are ok. This is for an old MGB that takes a single DIN size radio, and believe me that's the only place anything will fit. I really want an external audio input for my little portable GPS unit. There are a couple healthy speakers mounted in the doors that MUST be used in order to hear anything with the top down on the highway. (I assume all mobile rigs have an ext speaker jack.)

Make sure that MGB has negative ground power system. My 1967 MG 1100
sports sedan (Austin America) had positive ground among many other quirks!

Send a note to TenTec with a copy of your MARS license and they will send a replacement PROM. I have one in mine and use it on all MARS frequencies. As you appear to be Canadian, not sure if that will help.

After years off the air, I'm ready to get back on. I want to keep it simple though. I picked up a 6m/2m/440 Yaesu VX-7 HT at Dayton and I plan to use it for both base and mobile. I want an antenna that covers these 3 bands that I can mount off the side of my 80 ft. tower. (Off the side, because there is no way I can climb to the top anymore!) I'm not concerned with the gain, I just want something better than the rubber duck. Any product and mounting recommendations?

There are some tri-band mobile antennas out there. You may try some
variation of what I am using on my car.

I have a 1995 Ford Explorer and my radio is a Standard C5900 (6m,2m,70cm
bands). I use a diplexer that cuts off at around 100mhz. I take the
low (50mhz) feedline and run it to a quarter wave whip on my fender. I
removed the factory AM/FM antenna and replaced it with the 6mtr whip. I
then take the "high side" of the diplexer and run it to a Larsen
2m/70cm roof mount antenna on an NMO mount.

The 2m/70cm antenna I usually use is a low profile cellular look-a-like,
about 18" high and mounts on a standard NMO. I can easily replace this
antenna with one of the taller Larsen dual band antennas if I figure I
may need it.

Also, I have a splitter manufactured by Antenna Specialist that allows
me to use my AM/FM radio off the 50mhz antenna without damage to the
reciever.

Hello,
I recently purchased my first HF amp at a local hamfest and am planning on babying the tube (it uses the expensive and rare 8873). I would like to pulse my keying. I see that Ameritron sells one, but could the same result be had by sending a string of dits with my electronic keyer at around 50 or 60 wpm? Any other tips on how to baby this tube? The amp is a Heathkit SB-230. Would it be a good idea to set a muffin fan on top of this amp to suck air out of the cabinet to improve the cooling of the tube?

Not quite. Testing on rules, regulations and technical knowledge is a bit different than testing on one specific mode of communication. I use CW, but considered the continued archaic CW testing requirement to be silly and outdated. It should have been dropped 30 years ago.

We give driving tests on the ability to drive the car and follow the regulations. We don't test on the proper operation of a buggy whip or care and feeding of horses. While people still enjoy riding horses and driving around in buggies, they do this of their own free will and no one is forcing it on them through a testing process to get a driver's license. The horse as a general means of transportation is over. We have evolved beyond that, but people still ride horses for fun and enjoyment and the government does have to force it on individuals just in case we ever have to go back to using horses for transportation in an extreme emergency.

Anybody who can't pass the minimal 5 WPM doesn't deserve a license.

why?

and it isn't a matter f "deserving" alicense at all is about meeting
the legal mandaable requirement and now absent the treaty the code
fails to make the standards of law and the FCC knows even if you don't

5 WPM is easy.  esp if you use Farnsworth.

i'm at 18 WPM, and i can copy contest exchanges at 30 WPM.  i haven't made a
CW QSO in 10 years!

i think the code requirement should be 13 WPM plus for the upper classes.
keeps the riff raff out.

easy for you

not for me

I spent 5 years in my teens taking a test every couple of weeks towrds
the end. I did get so I might pass either the sending or receiving on a
given day but never both

guess from that data I suspect isf I had the time and schedule I could mange to pass a receiving or better still a sending test in roughly a year bt I don't my schedule leaves very busy eroids and very slow eriods

but all this is beside the point
nothing in the treaty give the USA the requirement to make such a test and nothing in the consitiotn reglates the matter so the power to use hf specturm is resvresed byt eh 10th amend to the states or the people themselves (para the constitition

unless the power to impose a code test can be shown to exist in other section such preahps shwoing that it is "nessacary and proper" an arguement that could have been made say when the miltary needed to warn us of freqs they were suing in cw or some other argument, the FCC and th congress lack the legeal power to maintain the test if challanged, an expensive and unpleasent task

> i think the code requirement should be 13 WPM plus for the upper classes.
> keeps the riff raff out.

but it did not keep the riffraf out as the folks listeningt o 80 m have known since long before the last change

Completely rebuilt with new capacitors and all of the Kiwa modifications and upgrades. All documentation is provided.

Look here: http://www.kiwa.com/PRO80.html

It has ALL the accessories that came with it when new, except the Sony wall wart. It has a Radio Shack replacement, original box, manual carrying case, carrying strap, FRQ-80 frequency converter, spare battery pack, tnc to bnc adapter and earphone.

Alignment is on the money and coverage with those not familar with it is 150 khz to 30 mhz. With the FRQ-80 adapter attached, it covers 115.150 mhz to 223.00 mhz.

Works perfectly, looks excellent, well taken care of and not abused.

$250 shipped/insured Continental U. S.

Completely rebuilt by the R-1051 shop less than one year ago. Complete with a set of U.S. Navy speakers with volume controls and audio cables with proper audio connectors. Mil-Spec power connector and cord. N coax adapter. This receiver was a complete rebuil;d, including the high

failure frequency standard temperature components with new parts. Works
perfectly, front panel is a 9+, top of case has the normal scratches,
rear panel is dent free, (a rarity).

$300, pick-up only in Gulfport, Ms.

Jan,
Email me and I can provide some help. One good document is the CI-V
manual from Icom. It has some sample Basic code which I used to improve
mine. I can also send you my Visual Basic (for Applications) code. You
should be able to figure out what you need. If you have Excel 97 or later,
you can use my spreadsheet directly. I posted it on several of the Icom 706
groups. Look for my call (if you join, you can download my file).

5 WPM is do-able! My 4 1/2 year granddaughter copies 5 wpm! Her 10 year old brother, who learned it in Cub Scouts, taught her. And, she can't even spell yet! But, she knows the alphabet from watching TV.

Some people have DIFFICULTY learning Morse Code, real difficulty!

I have taught Morse Code off and on for 40 years and from total ignorance to 100% success in 8 hours, 2 hours a week for 4 weeks [plus a little home practice. It is practice [work] that makes it successful.]

Some people can learn the code but suffer from "TEST STRESS". They can copy it comfortably in their home or their surroundings; but, when they have to demonstrate that skill in front of a 'WITNESS' who has pass/fail power, they tense up and fail. That's understandable and can be worked with.

Some people are dyslexic. But, they can hear it and talk it out, but can't get it on paper. But, they learned the code.

If you can learn the english alphabet, if you can learn the english language, if you can read this email then you CAN LEARN Morse Code at 5 WPM. You may never progress to 20 wpm [It took me 24 months at 1 hour of practice a day every day to progress from 5 to 20 wpm] but 5 wpm can be learned.

Teaching methods, practice criteria and testing/verification methods become critical for those with difficulty.

/s/ DD, W1MCE

I'll top post again for brevity and getting to the point.

I like CW! It is most likely going away as a requirement. I'm sad at this.

Amateur radio will change as a result. Everything changes. Hopefully the changes will be positive.

shove you insistance that you can speak for eveyone where the sun don't
shine
>
> Teaching methods, practice criteria and testing/verification methods become
> critical for those with difficulty.

indeed as do factors like random chance
>
> /s/ DD, W1MCE

now even if you are right why should somebody be made to take this test
after Icould endure 10 lashes in a public sqare too (and thatwould
certainly be easier)

No, it's a statement of historic fact, as determined by the licensing authorities. But it's incorrct -- anyone who can't copy 5 wpm deserves a license, but it's Citizen's Band.

A further valid statement would be that anyone with an IQ approaching 100 can learn to copy 5 wpm. That's less than one character every two seconds, which gives tons of time to recognize and write the single character before the next one begins. Dyslexia cannot apply, unless it is dyslexia that affects the remembered dot/dash pattern of a single character.

Are you saying that hundreds of thousands of no-code
techs didn't deserve an amateur radio license?

Poor Markie, so bitter that kids can pass morse code tests and he is
too stupid to pass one.

jesus, let's just do away with the written test *and* the CW test. let's just open the doors to anyone. we'll set up a webpage at the ARRL site, and you'll just point and click. it will be as easy as becoming a Reverend.

you could license your dog, a terrorist, anyone.

honestly, i am very glad there are minimum requirements. this keeps out people who are not serious about the hobby. people who don't know what they are doing should not be transmitting (esp on HF).

this whole CW debate is what we call the dumbing down of America.

i mean we have minimum standards for driving in America or becoming a citizen, why is ham radio so different?

i have an idea. get rid of the CW and triple the difficulty of the written test. there is certain element of society, which needs to be kept out of the HF spectrum.

When I got my driver's license in 1952, the driving test
was required to be taken on a stick shift vehicle. Do
you think that should still be a requirement?

How about just requiring a scientific/technical
degree from an accredited university?

SNIPPED

>
> Poor Markie, so bitter that kids can pass morse code tests and he is
> too stupid to pass one.
>

NO! Don't label another person! It is wrong to label! Particularly when you do not know any of his/her life's circumstances.

I said some people have difficulty learning or learning one particular subject.

It is reported that Albert Einstein had difficulty learning Calculus. The man was a Physics genius but needed help with advanced math.

I hold a degree in engineering and have completed four years of seminary, but I have not been able to learn conversational SPANISH. [About two years after ordination the Cardinal requested that I learn Spanish at the seminary . After two months the instructor approved my withdrawal from the class. I could learn vocabulary, how to read, write and the grammar for spanish, but my ear does not hear spanish. Total immersion in a Spanish speaking community would be the way for me to learn.]

I still say, anyone who can learn an/the alphabet can learn Morse Code. For those with difficulty, the solution to the issue is teaching METHODs not the student's difficulty. Any alphabet is recognizing sound patterns. Words are simply combinations of sound patterns.

For 'an_old_friend' I would begin by teaching an alphabet of SOUND PATTERNS. No requirement for speed. Just focus on sound patterns. Keep it very simple. Each two hour lesson would focus on no more than 7 letters until well heard. Then move to SOUND PATTERNS that are close to or similar to those [s]he has learned and is mastering. [Example: learn the sound patterns for 'A', 'W', and 'J' repeat until they are instantly recognized. Then move on to 'N' 'D', 'B', etc. Don't count 'dots' or 'dashes' but hear sound patterns.]

The next two hour session, one week later, would begin with a review then add 'T, M, O' followed by 'E, I, S, H'. Drill sound patterns. Then end the session by sending simple words using the 1/2 of the alphabet that has been studied. Speed is NOT a requirement! Accuracy is! If Farnsworth timing at 18 wpm is a roadblock, then change practice timing to 13 wpm or 10 wpm or 7 1/2 wpm or 5 wpm or 3 wpm. SPEED is NOT a REQUIREMENT! Accuracy is!

The next two weeks complete the alphabet. Week five would include the numbers and common punctuation. [5 sound character patterns and 6 sound character patterns].

Having said all this, my defense of CW is not any legal requirement. It is simply the best way to work rare DX. Much less power required. Much less bandwidth required. Much more discernible [copyable] in a pile. And, it is fun!

/s/ DD, W1MCE

> It is reported that Albert Einstein had difficulty learning Calculus. The man
> was a Physics genius but needed help with advanced math.

it was differential geometry that Einstein was unfamiliar with. when formulating relativity, he realized that he needed tools that he was not familiar with. so he went to a mathematician friend and learned which tools he needed.

please understand this in the context of 1912. differential geometry was fairly new back then, i believe it came from Riemann.

it's possible for some branches of math and physics to be relatively arcane. for instance, de Borges attempted proofs use operator theory. most mathematics students cannot read his papers. in fact, most professional mathematicians can't read them either. the only reason that de Borges proof of Bieberbach became accepted is that it was rewritten by other Europeans.

it's not uncommon for a theoretical physicist to have to learn a new branch of math to solve a problem. for instance, string theorists working on the landscape turned to statistics.

prehaps you are trying to be helpfull

you are coming off insulting and condesnding
that metodalogy was tried and my ears lose the older set of patterns
in a few day before I get a hold of the next set

> Having said all this, my defense of CW is not any legal requirement. It is
> simply the best way to work rare DX. Much less power required. Much less
> bandwidth required. Much more discernible [copyable] in a pile. And, it is fun!

fun for you the migraine headaches I get listening to any of it is not
fun none enjoys pain on that level

yes I might be ableto learn well enough now with only a receive or
tranmited test (and if I were going to try it would be to send) so I
don't have to listen to it

you have fun with fine go for it
Bear in mind I think Mose and esp the attiudes around are bad for the
ARS but I support your freedom to disagree and even to just do
something I consider nonproducitve just for sheer joy of it

I expect the same however for myself

> It is reported that Albert Einstein had difficulty learning Calculus. The
man
> was a Physics genius but needed help with advanced math.

relativity utilizes tensor calculus, which is a few semesters beyond the basic integral calculus taught to many college students. even today, relativity is viewed as fairly knotty. general relativity really isn't tackled until graduate school.

it's my understanding that Einstein was very good at math. to be a lowly patent clerk and revolutionize physics requires real skill.

what is advanced math? multivariable calculus and ordinary differential equations are viewed as advanced by the general population, however millions of people have learned the basics of these. in contrast, there are papers in number theory that can only be a read by a dozen people on the planet.

it's partially due to our own limitations as humans.

not in and of itself

but to bury the filth posted about me yes it is and it takes very
little time indeed I have the process almost automated

It's obvious that Markie is a retard.

> Wismen labels everybody except himself of course

Marky labels everybody Wismen since he is so fucking stupid and sees
Wismen everywhere!

Just look at Markie's posts, He can't learn the alphabet.
He can't post in anything resembling English.

> > For 'an_old_friend' I would begin by teaching an alphabet of SOUND PATTERNS.
No

Markie comes up with a rationalization of his spamming. Too bad it's
like him, seriously flawed.

>
> That's needlessly insulting.

No it isn't.

Some things in life require you do a little work to enjoy their benefits.
You don't want to learn CW, you shouldn't be allowed on ham radio.

And Five words per minute ain't a code test.  I can fart five words per
minute.  Anyone that can't learn 5 wpm is either lazy or a tard and should
stick to CB, FRS, and cell phones.

We gave those Techs the no code license because some said they weren't
interested in HF and wanted the freedom experiment with new modes, but
that's not what happened. All we got was a bunch of appliance operators
plugging up repeaters. Maybe only two or three percent are doing digital,
new modes, satellites, scatter, aurora, DX, etc. everyone else is gabbing
on a microphone like CB'ers waiting for the FCC's R & O to come out.

That's kind of funny but you know, I could actually agree to that. An EE degree gets you a licence. You're certainly qualified. :-)

*********** REPLY SEPARATOR ***********

Don't be sad my friend. CW will survive if people find it useful, and
especially if the diehards will stop jamming it down people's throats.

News flash: People don't like that with CW or anything else! :-)

Of course not. Today's driving test should require making a left turn
while dialing a cell phone and sipping a Starbucks.

Need to replace the momentary pushbutton switches on an MFJ 492 memory
keyer. I've looked in the Mouser and Allied catalogues without seeing
the replacement. Anyone know of a supplier for this switch?

Dyslexia cannot apply, unless it is dyslexia that affects the
> remembered dot/dash pattern of a single character.

Well, Larry, it took you to the last sentence, but you did actually lurch
into the problem.
Within seconds after learning what dah-dit-dit-dah means (or
dit-dah-dah-dit, for that matter), I fail to
accurately recognize them when they are sent again. Hundreds of tries --
all failures, all mine.

From your lofty perch, as a successful Morse Code user, you look down on me.
You could stand to learn a
little humility. It would serve you and the amateur community better than
dah-dit-dah any day.

You wish! Of the 55 questions on my Technician License exam,
I missed one. ONE!

Technically, I'm an above average ham. Through your dirty goggles,
however,
you see me as some kind of slug because I can't do code. So wrong.

Because I already hit the twit filter on you, I won't see any reply you
send, so
play it up any way you want.

Hello, I have a little used MFJ-492 electronic keyer that I've decided to put to good use as an amplifier tuner. (This is my first amp). The keyer defaults to a 50% duty cycle and I would like to get this down to around 10 or 20 percent. Any suggestions on what weight to use? This keyer is adjustable from 5 to 95 percent weight...I do not have a scope so would have to guess by ear. Thanks for the help.

Craig KB8FGC

argumentum ad hominem. if you killfile him because you dislike him, that is
one thing. but if you say he is wrong because you are an engineer, that is
a logical fallacy.

this is why we need to add critical analysis to the engineering curriculum.

should we get rid of the written test because people can't learn decibels
and basic algebra?

perhaps the CW test could have a question pool similar to the written. you
could memorize all the answers. i am actually dead serious. or standardize
the test so that the output is always like a QSO in super morse. there are
ways to make the test easier.

hmm, or we could have an option that you can view the CW in a spectrogram
and decode it visually.

It matters not. When management lacks the same talent, engineers will be chosen for economic rather than practical reasons. Outsourcing to India and H1B visas are proof. The fact that India has yet to produce a single Intel or Microsoft or H-P or Sony is lost on those whose who fawn over those rote trained hordes.

This unit is in brand new condition.  It's a VHF 64ch, 1-25 watts,
alpha-numeric dispaly.
Comes with mic but no mounting bracket or power cord.  Works great.

Price:  $325 shipped & eat paypal fees.  Will accept Money Orders but have
to be
           Postal Money Orders only.

Bill you are 100% wrong!

I am a right wing Republican, socially conservative, I attempt to be morally correct [that makes me politically incorrect quite often], and Conservative Christian [Clergyman]. I favor a very strong military [prior to my retirement from engineering, I served for 6 years as Program Chief Engineer on the USAF MX Missile (WS-118) RS/RV].

I believe the USA Constitution must be read and understood in the social context in which it was written. Changes should be by amendment not judicial agenda.

/s/ Rev. Dave , AKA W1MCE

See, labels can be 100% incorrect when you don't know the other person's life story.

Hi there.

Just a quick thought. I will not jump into the code vs. no-code fray. That said, I'd like to pass on an experience I had with a college professor friend of mine many years ago, now passed (Doc Bronfield WA2SMW). I learned CW at the age of 9 using flashing light. Now age 57. Got my novice at age 14 and general at age 15. The extra came easy as did 30 wpm plus CW. Not so with my friend Doc. He tried and tried, and then we realized that he had aural dyslexia. So I had an idea. With the help of local engineering types. They built a keyer that could sent different frequencies slightly for the dits and dahs. That was what he needed to get his code speed up and pass the general using the keyer during a FCC test. Here's what I believe should happen with CW. When I passed my extra there were no extra class operating privileges issued, but the FCC issued a nice Extra class certificate for the accomplishment (which I still have). I suggest we leave the 5 wpm code requirement in place as it now is, but go back to issuing the 20 wpm certificate by VE's. That would, perhaps, satisfy, the pro-code folk? It would reward the accomplishment without necessarily making it an Extra class requirement.

Jozef Hand-Boniakowski

You and Sal M onella should hit it off just fine. With his dyslexia, and your
mis-spelled words, he's probably the only one here that can clearly read
and understand what you typed.

Earl

MX missiles have never been launched operationally. They were decommissioned by
treaty after the fall of the Soviet Union.

If they had been used WE wouldn't be here!

You are mistaken.

In as much as the MX missile carries a hydrogen warhead I don't think
that Soong's country was destroyed by one.

no bout honest does one need to have the Formulas for adding resistor
(and cap and inductors i) series and paralell memorized.. ithink more
question on operating practices rules and rules would better serve us
than data we unlikely to need to use suddenly in the feild

>
> perhaps the CW test could have a question pool similar to the written. you

>
> hmm, or we could have an option that you can view the CW in a spectrogram
> and decode it visually.

I have offered such as an possible acomodation since I have in fact
done a few QSO's almost exactly that way (used a computer to decode
what it could and used my eye to fill in the blanks, that has me my 3
CW EME QSO) if alll I needed to do was decode a spectrgraph of Morse
and had TIME to work on on without have to hold any of the QSO in my
head I (believe) could do that (with some prep work of course)

I might also be just able to use the most extreme accomodation avalible
letter by letter (which elimates what beomce quickly a major probem for
me was the an I or 2 e's btw)but the VE teams around the last place I
ived were unwilling with out and MD signing off and I only ever saw a
phd and more likely MSSW about it , that these contacts in the distant
past (since I have learned ways of coping on my own) Indeed Robeson
made one of his early flaiming attack period on that very subject when
in his stlaking of me he learned of my posting to various support
forums for Dyslexics and othe rrelated condictions for asking "wht
would a MD that does not deal with LDs need in in order to medical
cerify the existance of the condiction, and Robeson a once very comon
poster hasrenewed that flame attack several times since

I have never inquired of the team roud here since by the time I became
settled enough to look into that the NPRM came out and since even those
levels would take a extensive prep, it did not seem worth while since
it seem clear we will son have at least No Code general if not Extra

I am looking for the plastic Tektronics cover for this
scope.

Will pay reasonable price for one. Email details.

Thanks

No, Not kick them off. When their license comes up for renewel they
would have to pass the 5 wpm code element that Techs used to have to
take to get the license.

Yeah but in newsgroups argumentum ad hominem is practically the order of the
day.
I only offered my education to refute the "lazy or a tard [sic]" cheap shot.

I recently bought some ICOM IC-F420S-10 and IC-F420NW-10 UHF radios at a bankruptsy auction. They had been used on the forklifts of a large factory. Each radio has the original ICOM HM-100N mic and a small magnetic base roof mount antenna.

The radios all appear to power up fine. When connected to a 12V supply and the power switch pushed, all the buttons are backlit, the indicator light for whichever frequency is selected lights and every time the freq increase/decrease or volume buttons are pushed the radio beeps. Also, when the mic is keyed the TX/RX button and the frequency 1 through 5 indicator lights illuminate.

The problem is I can't receive anything on any of them. Complete silence.

I'm not a radio operator; I'm just trying to check these out to see if they work before I resell them. The literature I downloaded online said these are PC Programmable and password protected. Is there a way to make these xmit and receive without a password? How do you input the password?

I downloaded an IC-F320/F420 manual from ICOM but the manual shows a slightly different model......one that has alphanumerics and other symbols on the function display instead of just Channel 1-4 lights and TX/RX like mine.

>

Dr. Nagel,

You please listen to me, I get PhD from big university. My university so expensive most American can't buy cafeteria lunch.

Long time ago, many years, I make secret lair in Bikini Atoll. American call it that, but I rename to Soong's Micronesian Micronation. It has nice ring to it.

Anyway, I build androids and mind my own business, but one day I monitor Americans and they say they blow up my island. Some missile test, but I say waste of perfectly good rocks.

I detect submarine with my acoustics, and I transmit on ELF and say "Don't blow up my island please!" But my Engrish so bad, they get confused and jam me with much megawatts. I not give up though. I build big ideograph out of bamboo, it say "Don't blow up my island thanks". But they have no analyst that read my language. I escape in nick of time in my junk ship.

look at picture, see big hole in middle of island?
http://en.wikipedia.org/wiki/Bikini_Atoll

MX missile destroy me. Now I teach dumb punk how to repair personal computer. I get revenge. I build big contest station and beat everyone.

Soong

NOPE! The MX missile has 100% nothing to do with the Bikini Tests! Those tests were conducted after WWII and ended in the 1950s. The MX missile initial deployment was 1985.

By today's standards, the Bikini tests were low yield [~20KT] fission devices. Today's standard is moderate yields [~300 to 500 KT] fission-fusion devices.

MX has nothing to do with Bikini Atoll.

Have fun building your androids.

India is not a country we rely on to build super companies (for lack of a better term). Take a look at what we send to India. Toxic chemical factories that would be choked to death by special interest groups and politicians. We also outsource technical support, which is a waste of time and money, good thing companies don't pay them much, but it's a cheap way of saying "we have tech support" without truly having it. Look at the shoe mfg. industry, all moved to third world slave labor countries. Good for the shoe industry as they no longer have to deal with unions and we keep management and development in countries that have the talent and resources to maintain state of the art products. Look at how the auto industry has changed. They sent 1000s of jobs overseas to cut down on union labor (with management and R&D in the US), and the Japs are opening plants in the US (with management and R&D in Japan) that will never deal with the UAW. I could go on forever with this post (and talk about NAFTA), but will end my rave at this point. BTW, changed subject header as it didn't seem to fit. I would have trimmed a few NGs but am unsure what groups you are subscribed to.

No, I see a newsgroup clown that can't accept the fact that this man learned to succeed despite his dyslexia. Instead of offering ideas that could help him learn code you decide to insult him. You sit and whine about how ham radio is going to shit because they allow no code tech licensing and possibly doing away with code altogether. But you missed the biggest point with ham radio it was to help people. Did you help this man by offering alternative options to learn code? No, you insult him instead. It is you and your kind that will be the downfall of ham radio. Blame yourself.

Why do you find the need to boost your (lack of) self-confidence by insulting this person by comparing him to Mark? Mark chooses to sit on his ass sucking the entitlement system dry and contributing nothing to society, while this person decided to make the best of his what God gave him and he contributes to the same entitlement system that Mark chooses to deplete.

Earl you are not the Pearl of wisdom, you are the faux Pearl that trolls to enhance your (lack of) self-esteem.

Something I just thought of at the spur of the moment (not to mention keeps me on topic), some disabled person should sue to remove ALL code requirements, or offer an exclusion to those with disabilities to not have to take ANY code test under the Americans with Disability Act. I'm sure that person could even get a free ACLU lawyer to handle it.

Many years ago, 1950s, there was a very active 10 meter ham in Danvers, Massachusetts, during the period of Class A, B and C licenses. He was an arthritic quadriplegic. He was wheel chair bound, lived alone, and required visiting help to get into and out of bed and have his meals prepared and served.

He had a Class C [Conditional] license. He learned to copy 'read' CW in his head although he did not have the ability to send. I don't think he would consider a lawsuit appropriate.

Some of the OTs on this list may have worked him. W1JFS, Les MacCrakin. God Rest His Soul.

Having hired many engineers in my lifetime I can state that good engineers meet several criteria:

o meet the technical requirements established by your customer,

o meet the schedule established by your customer,

o meet the costs established by your customer.

Economics is only 1/3 of good engineering talent.

Well I described a number of alternatives to learning and he persists in
saying he cannot learn code. Now I have not insulted him that I know of
(although it's difficult to predict what one might take as an insult).
However, if someone truly is incapable of learning code, then they are
unable to learn to understand the spoken word and to speak. The fact that
he can speak and understand the spoken word means he can learn code at the
basic level of 5wpm. He is his own biggest enemy.

A completely deaf person can speak and read lips but he/she
still cannot even hear Morse code. What you need to understand
is that something that seems normal to you is missing in some
people. If an amateur radio license required dunking a basket-
ball, could you do it? As one who can dunk a basketball, I can
tell you all you need is enough will and effort and you can do it.

Patrick, I hope you are still reading this thread as I can't seem to find a valid email address for you.

Here is the procedure to unlock the LSB function in the Furuno FS1503:

You need to change system parameter 9914 to "0" to enable LSB capability.

SYSTEM PROGRAMMING PROCEDURE:

1) While pressing and holding down the [CH] key, turn the power on to enter system programming mode, release the [CH] key after unit is on and "MEMO" shows in the display.

2) Select function 9999 by rotating the FREQ/CH knob.

3) Press [CH], [1], [5], [0], [3], and [ENT] keys. ("1503" is password.)

4) Select function 9914 by rotating the FREQ/CH knob, then press [CH], [0], and [ENT] keys.

5) To finish up, escape the programming mode by simply turning off the radio.

The system programming is completed.

Baaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa...
HA HA HA HA AH HA HA HAHAH AHAHAA!!!!!!!!!!!

Oh what a maroon this putz is eh folks????

>We already have one CB
> service, we don't need two.   Please pressure the FCC to endorse the
> following items for the good of the service and County.

Oh jeebsus-h-christmas on a rocket-propelled sled in the Nevada desert!
You are one dumbass dipshit. A perfect ambassador for ham radio.

You were'nt the FATASS I saw on that scooter at Dayton
pulling that wagon of junk around were you???

I mean.....Jeeze!

I never saw so many FAT ASS HAMS ON SCOOTERS at Dayton this year.
Bet the electric bill to re-charge all those Electric Mobility scooters was
TWICE
the cost what it needed to run the Icom and Yaesu display!

Here's your future of ham radio folks!

OLD FARTS who EAT and SMOKE themselves to death
faster than the barstool warmers at the local VFW and AL Post!

> God bless America.

Did you know that G-d spelled backwards is "dog".
(I know you did, just wanted to give the knife a little twist.....(grin)

Baaaaaaa hahahahahahahahahahahahahahahahahaha!!!!!
You do that an ARRL will have a hissy-fit. They got
enuf trouble keeping the few fatasses alive and buying
that pathetic 75% advertising magazine of their's...

Thanks for the diagnosis Doc,  I wondered what was wrong.  So did you
finally decide to give up CB for ham?

sc

indeed how will know the difference in the bands after no code goes
through

likely that hf will start to resemble VHF more with politier operators
and an avoidaence of endless discssuions of ham aliments
>

I have never heard anything like that on CB I hear worse on a weekly
basis on Ham radio

Yeah, that's all we say on 11 meters. I can't wait till they start handing
out tickets like they did with CB just so I can go on 80 meters and say
AAAAAAAAAAAAUDIOOOOOOOOOO
Can I run my echo on 80 meters too?
Get a life. Many a good ham has roots in CB.

If they did what you want, ham radio would be dead in just a few years.

The primary problem causers in the past and present aren't new hams,
they are the old timers who passed all the elements a long time ago.
Maybe it's the cause of their behavior?

The code needed to go 40 years ago, it's about time it was removed as a
requirement.

Thanks a lot Ed! I will forward the information along with your Callsign.
Maybe they will drop you a note or make contact.

I am in need of a DM-28-R dynamotor for a BC-348-R receiver.
Must be in working condition. Not too concerned about looks
(can't see it anyway, once it's installed in the receiver!).
Once I finish restoring this receiver, it will be installed
aboard a B-17.

Thanks and 73,
Dean K5DH

Let's face it, if intelligent conversation was important, none of us would
be on Usenet in the first place to read the snivling and whining of trolls
like you.

You're welcome, Patrick. I emailed about 4 yacht maintenance vendors here on the West Coast and got back two positive replies. To give credit where credit is due, the first response came from Marty, WA7JMA.

I sent this info to mods.dk also. Hopefully they'll post it to their mods website.

And swore it would do 1500 easy...IT WONT...Id like to return it but stupid me, I didnt write down your call. I know you were part a bunch from the McKinney Plano area I think. And you werent the old guy with the sign around his neck selling an Alpha (heard that one was bad also) Please contact me via email or phone. Im gonna make you stand up, one way or another. Eventually the table chart will tell me..be easier if you call me first...thanks Murray K5MDM 432 553 5621 Odessa, Tx
PS: Its beautiful no doubt, but I looked in side....one tube looks new though has probably been brought down to nothing by the other two which appear to have been dragged thru the ocean. Maybe behind the May Flower. Any of you guys know who Im looking for? Out in the hallway 5 or 6 tables from the food entrance where I was.????? He had a beautiful alpha and a bunch more stuff was there too with several guys at the table..Help please. Murray

I am trying to build a set of lp filters for the ham bands for use with
the 600w motorola designed fet amplifier described in last months qsl
.I have successfully modelled suitable filters using pspice using 3

series inductors with 2 parallel caps for each band but I notice the current in the caps can be several amps peak. values range from 150 to 3000pf. Can ceramics be used? Or do I need several parallel silver mica caps? How much power can one dissipate in these caps? Near the corner frequency there is as much as 6db gain under low load conditions and this exacerbates the problem. I could move the corner further up so that the filter is not excited at the peak current, but then I will probably have to increase the number of poles to 7 from 5 to get enough attenuation at the third harmonic. Is there a better filter architecture that minimizes cap current?

As much as I hate plurals formed with apostrophes, you're wrong.

From what I remember, that's not universally incorrect.

Oh, and I'm taking your apostrophe quiz, and it appears there's an error
in the "correct" choice: (B) uses "its" as the contraction for "it is".
So the answer to 17 should be "None of the above". (I scored 100% also.)

Incidental note: I've never understood how people who use "it's" as a
possessive never even think to use "hi's" (though some use "her's" and
"their's").

I doubt it. The word Allah appears to be a conglomeration of "al elah", meaning "the god".

A well educated friend told me that the Aramaic word
for "God" is "Allah". It would be nice to know if
he was wrong about that.

Aren't Yahweh, Jehovah, and Allah all the same God-head?

Seems to me that ole' Murray has forgotten the meaning of the phrase Caveat Emptor. Believe it not, but for the most part, anything you buy at a hamfest (other than from a reputable commercial vendor) is "as is." In this case, I'd refer you to the phrase "boat anchor" for further action...

Man, I wish I still had one. A BC 348...big and black...was given to me
by my Elmer 35 years ago in my novice years. He built a basic power
supply: rectifiers but no transformer...I got a nasty shock if I didn't
plug it in right (in the old days before polarized plugs) It did manage
to keep me awake during those wee hour ops. It was a neat receiver!

John

I posted it to my blog as well.
http://www.shipsrecord.com/blogs/patrick/archive/2006/06/13/974.aspx

Judy's reply was:
"Fantastic! Patrick, you are a sweetheart. Will let you know next week how it worked. Will be really great to be able to hear Chris and Eric weather reports before we head out to Trinidad."

Going to Trinidad. I'm so envious!

I have the following Motorola hand mics for sale:

New
HMN 1001B DTMF
HMN 1031A DTMF
HMN 1049A
HMN 1061A 2EA

Used
HMN 1001A
HMN 1001B
HMN 1056A
HMN 3013A DTMF
HMN 4005A
MBTMN 1025A
TMN 6054A

Thanks
Frank

I'll spell it your way next time I see a dingo in my trash can. Now go catch
a croc and stick your thumb up it's bum.

  Great! Glad the part at sea was pleased. I would have contacted you on
the Blog forum site, but it appeared I had to sign up a new account in
order to email you. Glad you were keeping up with your posting here.

I also successfully added that mod to http://www.mods.dk for other mariners out there who might want to use their Furuno on the ham bands.

Yup, me too.   I listen to "A Way With Words," a radio program on KPBS (available streaming at kpbs.org) whose host is language writer Richard Lederer ("Anguished English," "Get Thee To A Punnery," etc). Richard said that "it's" for "its" (possessive) was considered correct until near the end of the 19th century. I didn't know that.

Man, the below is an old post... anyway the used kpt-50 programmer
is long gone/sold. I bought up a number of the last units Kenwood
had at the time and have been slowly selling them off. The Epcom
price for the kpt-50 is about $330 at last glance, I was selling
them for about $245 list and applying various discounts to get the
end price just about or just under $200... say about $195 per
unit. The mentioned price is for a new (not used) programmer with
the matching (and really handy) kpg software for use with a PC. Using
the matching software with a pc is really the only way to go. You
can save and retrive both base station and repeater station files,
which include the frequencies and ctcss (PL) - dcs (DPL) codes to
your computer hard drive (archived).

Anyway, I'm still around and still a full line Kenwood Dealer. Please
feel free to email me if you have any questions. Find me using the web
page url just below.

cheers,
skipp

: base and mobile radios. It will also do (some of the) other similar
: Kenwood models.

: This unit is probably my last one for sale. I sold them on Ebay
: earlier
: this year for various amounts up to $239 each. This is an original
: kenwood unit and yes I'm an Authorized Kenwood Two-Way Radio Dealer -
: Service Center and would be happy to supply any two-way radio - parts
: needs you might have. Drop me a note if you have any Kenwood Two-Way
: question.

: This is a previously used unit, started life as my personal kpt50, lent
: it
: to "a friend" who had it over a year to program one "quick repeater
: job".
: Got it back just a short time ago. I will put a full new equipment
: warranty on it and provide copies of all the proper programming
: information. I had to use my last inventory unit in place of this unit
: while it went on vacation with my friend. Now it's back and I have one
: unit extra.

: I used to program the tkr-820 (and 720) repeaters by hand using this
: type
: unit, but forget that... this unit has the normal rs-232 pc port
: access
: which allows you to do everything on your related laptop and save the
: data
: in regular archive files. Much nicer... I'll include a regular copy
: of
: the pc software with the unit, not bad.

: Now the price, set below actual Dealer cost at $165 plus actual
: shipping,
: figure maybe $5 for USPS Priority Mail.

: OK, that's about it. Drop me an Email if your are interested. If no
: one
: responds within a week or two, I'll toss it up on Ebay. Don't be
: confused
: by the "clone units" often listed on Ebay. Some of the associated
: programming units don't work on all the models. I know because I
: bought
: one myself before I became a Kenwood Dealer some years ago.

: This is an original Kenwood made KPT-50 programmer.

: That's about it, remove the NOSPAMPLEASE from my email address if you
: want
: to drop me a related message. My ebay ID is over 700 actual... all
: positive feedback so I hopefully must be doing something right.

: Thank you for reading this post.i WOULD BE WILLING TO PAY $140.00
: DOLLARS FOR YOUR KENWOOD KPT-50 PROGRAMER.
: skipp

: skippNOSPAMPLEASE@pilot.ucdavis.edu
: i WOULD BE WILLING TO PAY $140.00 DOLLARS FOR KENWOULD KPT50
: PROGRAMER.i WOULD BE WILLING TO PAY $140.00 DOLLARS FOR YOUR KENWOOD
: PROGRAMER. YOU CAN EMAIL ME AT GL4871@ALLIANCECOM.NET THANK YOU JEROME
: Remove the NOSPAMPLEASE   else I'll never receive your message.

Loser?? You can't even spell!! What does "gte' mean??

Or, did you forget to turm ON your spell checker?

But, I did like the play on words: 'phoney'

   GTE was "General Telephone, Inc." a company that ran small local
phone systems and sold early PBX systems. ;-)

That's as bad as using entitled. Michigan Tech voted that as one of
the 10 words that should be eliminated in one of their yearly

selections.

Yeah, but is he a fraudster/con artist, as is Charlie Nudo aka
66fourdoor? EBay whores are pathetic, but at least not criminal as is
Nudo.

My appologies,   it appears that my previous reply was not what you were looking for, but in fact you wanted the technical procedure that Furnino service techs use to enable the LSB selection.

I don't have that information, but perhaps if you can contact Furnino yourself, by telephone or email, you can get it.

Assumuing you are in the United States, Furnino is availabe at:

360-834-9300   and email: info@furuno.com

Ed

As in words like, "amen", are pronounced "ah".

That certainly seems confusing to me and the confusion
is not apparent until more than halfway through the
sentence.

A's in words like, "amen", are pronounced "ah".

No confusion there.

I know hillbillies still use the long 'A'. :-)
Did you know that when Jesus prayed to God in
Aramaic, he probably prayed to "Allah"?

How about dropping rec.radio.shortwave from the news group list.

Thanks in advance.

Dear sir:

The FCC has been dumbing down ham radio for several years now. This has hurt the integrity of the service and is bad for America. They are planning to dumb it down again really soon now and their plan will make ham radio like CB and it will be bad for America. We already have one CB service, we don't need two.   Please pressure the FCC to endorse the following items for the good of the service and County.
God bless America.

Signed

(Your name & callsign)

No more automatic renewals. Individuals must retest and pass all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code license one year non-renewable.

this is the only point he is right on.
when I took my test, some math was still required (along with knowing where
you were legally allowed, etc.).

I have had chance to read the latest offerings in the test pool.

I'd like to see them bring back the math problems (antenna theory, ohms law
and the like).

Interesting to note that "Slow Code" and "Radio Buff", in addition to having apparently-identical agendas about rolling back FCC standards into the 1950s or before, both access the Internet via Level3 dialups in Denver.

Also interesting to note that the poster going by the handle of "New ham", who asked a rather inane question about a capacitance hat for

his antennas (but who has no other posting history at Google),
accesses the Internet via a Level3 dialup in Denver.

Possibly it's something in the water up there. Perhaps those three
gentlemen ought to form a new ham club in Denver? That's enough
members to qualify for a club-station license.

Then you fail to recruit new blood into the hobbie. Certainly they should have restrictions, but you need to have a no-code ticket available, otherwise why leave 11 meters. I do not want to learn the code, I have no interest in learning the code, I never plan to use code, but someday I may change my mind, and when that day comes I can test and move up in class. But if you stop people at the front gate, don't expect them to return.

>> Make the no-code license one year non-renewable.

>Then you fail to recruit new blood into the hobbie.

We recruited more new blood into the "hobbie" when the Novice required
code (if you can't learn 5wpm, there's no way you could learn enough
theory to pass the old exams - and there's more theory to know these
days) AND one year non-renewable than we do now. There are reasons
there's less new blood, but code isn't one of them.

>Certainly they should have restrictions, but you need to have a no-code ticket available,
>otherwise why leave 11 meters.

Good question. Ask those who did back in the early 60s - when code

was required. Maybe just listening to 11 meters, then listening to 20
meters, is reason enough.

> I do not want to learn the code, I have no
>interest in learning the code, I never plan to use code, but someday I may
>change my mind, and when that day comes I can test and move up in class. But
>if you stop people at the front gate, don't expect them to return.

Since tens of thousands of hams "returned" when code was required,
your basic premise is wrong. *You* wouldn't return if code were
required, but you aren't everyman. (Try the old General as the "entry
level" exam, 13 wpm and pretty stiff theory, with the only upgrade
being the Class A ticket. And yet, many many hams went that route.)

Dave, you forgot about the altutude? The air is pretty thin in Denver.
More likely oxygen starvation.....

I'll go 2 out of 3 on that. Kennedy was and intravenous meth user who almost started WW3.

Kennedy would be too conservative for even the neocons,
and unrecognizable by the "progressives".
Assuming you meant JFK and not Teddy the Tippler.

Reagan may have wanted a WW3, but he didn't use drugs. The documentary I saw
about JFK said he had a Dr. shooting him up with meth up to 5 times a day.
I'm not the conspiracy theory type of person, but I can see why a government
organization would want him dead.

The fact that he "ruined" government (government as it was, at any rate), might have something to do with that.

Actually, if you knew anything about "radio" in general, you would realize that we DO have more than one CB service; matter of fact, there are 5 CB Services.

One (GMRS) requires a license, one that in non-voice (R/C,) and 3 that are open to whomever wants to use them, license-free (CB, FRS, and MURS.)

Get at least a SMALL clue...

Better still is if you'd get a dictionary, stupid. Let's keep the morse
code just to keep retards like you no code techs, Marqueer.

Russ,

If you can find one, a Shure Brothers 404C will work superbly
with your TS-520S.

73,
Dean K5DH

[I would be willing to pay $140.00dollars for your kenwood kpt-50
programer thank you Jerome
=Skipp has Kenwood stuff] Kenwood kpt-50 repeater and radio proThis
unit programs the Kenwood TK and TKR-720 / TKR-820 series repeater,
base and mobile radios. It will also do (some of the) other similar
Kenwood models.

This unit is probably my last one for sale. I sold them on Ebay earlier this year for various amounts up to $239 each. This is an original kenwood unit and yes I'm an Authorized Kenwood Two-Way Radio Dealer - Service Center and would be happy to supply any two-way radio - parts needs you might have. Drop me a note if you have any Kenwood Two-Way question.

This is a previously used unit, started life as my personal kpt50, lent it to "a friend" who had it over a year to program one "quick repeater job". Got it back just a short time ago. I will put a full new equipment warranty on it and provide copies of all the proper programming information. I had to use my last inventory unit in place of this unit while it went on vacation with my friend. Now it's back and I have one unit extra.

I used to program the tkr-820 (and 720) repeaters by hand using this type unit, but forget that... this unit has the normal rs-232 pc port access which allows you to do everything on your related laptop and save the data in regular archive files. Much nicer... I'll include a regular copy of the pc software with the unit, not bad.

Now the price, set below actual Dealer cost at $165 plus actual shipping, figure maybe $5 for USPS Priority Mail.

OK, that's about it. Drop me an Email if your are interested. If no one responds within a week or two, I'll toss it up on Ebay. Don't be confused by the "clone units" often listed on Ebay. Some of the associated programming units don't work on all the models. I know because I bought one myself before I became a Kenwood Dealer some years ago.

This is an original Kenwood made KPT-50 programmer.

That's about it, remove the NOSPAMPLEASE from my email address if you want to drop me a related message. My ebay ID is over 700 actual... all positive feedback so I hopefully must be doing something right.

Thank you for reading this post.i WOULD BE WILLING TO PAY $140.00 DOLLARS FOR YOUR KENWOOD KPT-50 PROGRAMER.
skipp

skippNOSPAMPLEASE@pilot.ucdavis.edu
i WOULD BE WILLING TO PAY $140.00 DOLLARS FOR KENWOULD KPT50

PROGRAMER.i WOULD BE WILLING TO PAY $140.00 DOLLARS FOR YOUR KENWOOD
PROGRAMER. YOU CAN EMAIL ME AT GL4871@ALLIANCECOM.NET THANK YOU JEROME
Remove the NOSPAMPLEASE else I'll never receive your message.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/235576

Topics discussed in SolderSmoke #25:

-- Bill puts Astatic D-104 on ECHOLINK

-- Mike's 80 mtr DSB rig becomes transceiver!
-- Mike's two chip EMRFD NE602-LM386 receiver
-- The rewards of homebrewing

NEXT EDITION: RECORDINGS OF MIKE and BILL's DSB RECEIVERS!

Listen at: http://www.ourmedia.org/node/235576

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/235576

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London

To take the argument well into absurdity (as if it
needed any help), we can  discuss whether your
Webster's is descriptive or prescriptive.

On the contrary, the plural of the letter A is A's. The plural
of the number 3 is 3's. It's not too much of a stretch to assume
that the plural of SWR is SWR's.

From Webster's: "apostrophe - a make used to indicate ... the
plural of letters or figures."
--
73, Cecil http://www.qsl.net/w5dxp

Well, Webster shows more than one error, at least insofar as formal English goes. What Webster depicts is the "dumbing down" of what our kids are being taught today.
Do what you wish, but those who are better educated will continue to use the apostrophe to denote the possessive rather than the plural.

That definition agrees with what I learned in English
class 50+ years ago. The plural of a number uses an
apostrophe. So 73's would indeed be the plural of 73
as in "many best regards". It's no stretch to assume
that the plural of SWR would be SWR's.

Incidentally, I have an obvious typo in the definition that the spell-checker didn't catch. Should have been:

"apostrophe - a mark used to indicate ... the plural of
letters or figures."

I have a "Webster's New Universal Unabridged Dictionary"
which contains a "Basic Manual of Style" in the back.
Here's what it says for "Apostrophe: ... 3. To form the
plurals of letters or figures add an apostrophe and an s."
That's seems to be prescriptive.

Would a "Basic Manual of Style" change your mind?

I have a "Webster's New Universal Unabridged Dictionary"
which contains a "Basic Manual of Style" in the back.
Here's what it says for "Apostrophe: 1. ... 2. ... 3. To
form the plurals of letters or figures add an apostrophe
and an s. ..."

It does say that a few people object to number 3. As in
many other areas of the English language, the context of
the use of the apostrophe determines its function:

1. to replace missing letters,
2. possessive,
3. plurals of letters or numbers.

P.S. The better educated posters avoid violating the
attribution rules for newsgroups.

good one
If I can ever help in increasing the absurdity of these newsgroups, I am
glad to do so.

BTW, all dictionaries are descriptive.

Ehams reviews are very subjective and the rating of the radios should not really be compared on their score scale. By that measure the Icom 736 is a better rig than the Icom 7800 or Ten Tec Orion. It is best looked at as a measure of user satisfaction with that particular rig to the users expectations for the money. I have a Kenwood TS 850 and a TS 2000 and the TS 850 absolutely blows away the TS 2000 in receiver performance. The link below shows Sherwood Engineering rankings on many rigs based on close in dynamic range performance. Note how high the TS 850 is in the list with affordable Inrad filters installed [not roofing filter]. Almost all the radios above it are ham band only rigs and the IC 765 has the narrow roofing filter in it I believe. Interesting is how great a performer the TS 830 is shown to be. --- Steve

That list is only a ranking of narrow spaced dynamic range and doesn't take into account the many other things that make a radio great. That's wonderful engineering data, but is very limited. That's why user reviews such as one finds on e-ham and other places are valuable. Obviously they're subjective. But they take into account real-world, everyday user impressions of a rig which includes a wide variety operating styles and tastes. How, for example, can I cross band repeat, or run six meter e-skip openings on a TS 850? I do that all the time on my current rig. And still get outstanding performance when running HF (without the need for optional "affordable" extra filters) See my point? If we only went by spec rankings, we'd all be running Orions, I guess.
